ODF General Messages Interface Document

25 October 2013 Technology and Information Department © International Olympic Committee

This document is based on information provided by the IOC to Glasgow 2014 and is subject to the terms and conditions of the license agreement entered into between the IOC and Glasgow, which is reproduced hereafter. The copyright of such document belongs to the IOC

License

The document accompanying this license and the information contained therein (the Document), whether in a paper or electronic format, is made available to you subject to the terms stated below. By using and/or copying all or part of the Document, you (the licensee) agree that you will comply with the following terms and conditions.

- 1. You may, on a non-exclusive basis, use the Document only on the condition that you abide by the terms of this license. Subject to this condition and other terms and restrictions contained herein, the Document and the information contained therein may be used (i) to further develop the standards described in the Document for use in relation with the Olympic Games and/or (ii) to develop similar standards for other events than the Olympic Games (both (i) and (ii) are hereinafter designated as the Permitted Use, and works further developing these standards for the Olympic Games or developing similar standards for other events are hereinafter referred to as Derivative Works), and copies of the Document or of Derivative Works may be made and distributed for the purpose of the Permitted Use, PROVIDED THAT the COPYRIGHT and references to the IOC appearing in the Document and the TERMS OF THIS LICENSE are included on ALL such COPIES, and further PROVIDED THAT you do not charge any fee or any other monetary compensation for the distribution of the Document to others. The copyright and other intellectual property rights in the Document remain vested in the IOC and the IOC remains entitled to assert his copyright or other intellectual property rights in the Document against any person or entity who does not comply with the terms of this License.
- 2. A copy of any Derivative Work shall be provided to the IOC free of charge. Moreover, the IOC is granted a worldwide, perpetual, unrestricted, royalty-free non-exclusive license to use any Derivative Work for the further development of the standards made by or for the IOC in relation to the Olympic Games (these standards and the documents describing them are hereinafter referred to as Further Standards) and to make or have made all kinds of exploitation of the Further Standards, with the right to grant sub-licenses
- 3. Except if reproduced in the Document, the use of the name and trademarks of the IOC is strictly prohibited, including, without limitation, for advertising, publicity, or in relation to products or services and their names. Any use of the name or trademarks of the IOC, whether registered or not, shall require the specific written prior permission of the IOC.
- 4. NO WARRANTY, EXPRESSED OR IMPLIED, IS MADE REGARDING THE ACCURACY, ADEQUACY, COMPLETENESS, RELIABILITY OR USEFULNESS OF ANY INFORMATION CONTAINED IN THE DOCUMENT. The Document and the information contained herein are provided on an "as is" basis. THE IOC DISCLAIMS ALL WARRANTIES OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, ANY WARRANTY OF NON-INFRINGEMENT OF PROPRIETARY RIGHTS, MERCHANTABILITY, OR FITNESS FOR A PARTICULAR PURPOSE. IN NO EVENT SHALL THE IOC BE LIABLE TO ANYONE FOR DAMAGES OF ANY KIND ARISING FROM OR RELATING TO YOUR ACQUISITION, USE, DUPLICATION, DISTRIBUTION, OR EXPLOITATION OF THE DOCUMENT OR ANY PORTION THEREOF, INCLUDING BUT NOT LIMITED TO, COMPENSATORY DAMAGES, LOST PROFITS, LOST DATA OR ANY FORM OF SPECIAL, INCIDENTAL, DIRECT, INDIRECT, CONSEQUENTIAL OR PUNITIVE DAMAGES, WHETHER BASED ON BREACH OF CONTRACT OR WARRANTY, TORT OR OTHERWISE. THE IOC FURTHER DISCLAIMS ANY LIABILITY FOR ANY DAMAGE CAUSED WHEN THE DOCUMENT IS USED IN A DERIVATIVE WORK. The IOC further disclaims any liability regarding the existence or inexistence of any intellectual property or other rights that might be claimed by third parties with respect to the implementation or use of the technology or information described in the Document.

The same conditions as those described in this Section shall apply mutatis mutandis to the license granted to the IOC on the Derivative Works in Section 2 above.

- 5. This License is perpetual subject to your conformance to its terms and conditions. The IOC may terminate this License immediately upon your breach of any of its terms and, upon such termination you will cease all use, duplication, distribution, and/or exploitation in any manner of the Document.
- 6. This License is governed by the laws of Switzerland. You agree that any disputes arising from or relating to this License will be resolved in the courts of Lausanne. Switzerland.

IF YOU DO NOT AGREE TO THESE TERMS YOU MUST CEASE ALL USE OF THE DOCUMENT NOW.

1. Introduction

1.1. This document

ODF defines a standard interface valid for all sports and all customers, from Press Agencies and Broadcasters to International Sport Federation.

ODF standardizes all data managed during a major sporting event, including schedules, results, records, medals, weather data, etc.

ODF implements this standardization by means of defining data structures that are the ODF messages. The ODF interface documentation puts together three groups of ODF messages:

- (a) Common messages that are not sport dependent (e.g. Weather messages)
- (b) Common sport messages shared between all the sports (e.g. Schedule message)
- (c) Sport messages that follows general rules for all sports, but that need to be extended and/or overwritten per each sport in order to consider the sport specificities (e.g. Start List message)

This document describes all common messages. ODF Discipline Data Dictionary documents extend or overwrite the general rules for all sports described in the ODF General Messages document.

1.2. Objective

ODF main objectives are:

- Define consistent data structures for a wide range of sports and systems,
- Re-use data definition and minimize future changes since ODF is designed based on the extension of the messages extension, and
- Separate presentation layer from data structures: ODF is data oriented, and it is presentation independent as its main aim is to feed all the variety of systems from the different customers.

This document establishes the general principles for reaching these ODF objectives.

1.3. Main Audience

The main audience of this document is:

IOC as the ODF project leader,

- ODF users such as the Press Agencies, Broadcasters and International Sport Federations, and
- Suppliers of the systems generating ODF messages: T&S / OVR Suppliers and IDS Supplier.

1.4. Glossary

The following abbreviations are used in this document

Acronym	Description	
IF or International	The international governing body of an Olympic Sport as	
Federation	recognized by the IOC	
IOC	International Olympic Committee	
IPC	International Paralympic Committee	
NOC	National Olympic Committee recognized as such by the IOC	
ODF	Olympic Data Feed	
ODF Light	It is a type of ODF message that includes extensions to standard ODF messages in order to resolve references between messages and common codes. These extensions facilitate the message processing for ODF customers	
ODF-PiT	Olympic Data Feed Point in Time, messages that are generated at certain point during competition	
ODF-RT	Olympic Data Feed Real Time, messages that are generated when available	
RSC	Results System Codes, determine uniquely one unit of the competition, specifying the discipline, gender, event, phase and unit.	
Sport	is administered by an international federation and can be composed of one or more disciplines	
WNPA	World News Press Agencies	

1.5. Related Documents

Document Reference	Document Title	Document Description	
TBD	ODF Message Transmission Document	This document describes the technical standards to be used to transfer ODF messages between the message generators and the final ODF users	
TBD	ODF Common Codes Document	This document describes the ODF codes used across of the ODF documents	
ODF/SCH	ODF Schema	The ODF schema is the tool that helps with the syntactical message validation when developing or testing ODF messages.	
ODF samples	ODF samples	The ODF sample is a collection of	

real sport messages.

2. Codes

2.1. Global Codes

Several global codes are used in the definition of the messages in this document.

The following table describes the codes entities used in the ODF Definition indicating whether the set of values can be found in the ODF Common Codes Document, or listed in the table itself, otherwise.

Code Entity	Format	Code Entity Set of Values
CC@ AccreditationStatus	S(6)	Defined in ODF Common Codes Document
		See entity Accreditation Status
		The entity's attribute to be used is Id
CC @Category	S(3)	Report Types defined by ONS.
CC @Competition	<u>S(7)</u>	Defined in ODF Common Codes Document
		See entity Competition
		The entity's attribute to be used is Id
CC @Discipline	S(2)	Defined in ODF Common Codes Document.
		See entity Discipline.
		The entity's attribute to be used is Id
		Valid disciplines contains Non-Sport attribute='N'
CC @DisciplineGender	S(1)	Defined in ODF Common Codes Document.
		See entity Discipline Gender.
		The entity's attribute is to access to the
		Discipline Gender entity is the combination
		of Discipline + Gender
CC @Event	S(3)	Defined in ODF Common Codes Document
		See entity Event.
		The entity's attribute to be used is Event
		It will be related to Discipline and Gender
CC @Function	<mark>S(30)</mark>	Defined in ODF Common Codes Document
		See entity Function
		The entity's attribute to be used is Id
CC @Item	S(3)	News items defined by ONS.
CC @Language	S(3)	Defined in ODF Common Codes Document
o o canguago	3(0)	Dominor Codes Document
		See entity Language

Message Definition

3.1. ODF Message Structure

ODF interface defines ODF messages. ODF messages are data structures based on standard XML.

3.1.1. ODF Declaration

The first line in an ODF message is the XML declaration. It defines the XML version and the encoding used, UTF-8.

3.1.2. ODF Header

The next line after the declaration is the ODF header.

ODF header is the root element and it is always introduced by the element Odfbody.

Header attributes identifies ODF messages uniquely. The message unique identifier is the aggregation of the following attributes:

- DocumentCode,
- DocumentSubcode (Optional)
- DocumentType and
- DocumentSubtype (Optional)

The following table describes the ODF header attributes. "M" designates mandatory attributes that must appear in all ODF messages. "O" designates optional attributes. Optional attributes can be required depending on other attributes in the header.

Attribute	M/O	Value	Comment
/ ttti ibuto	,	T alao	oonmion.

			•
DocumentCode	M	S(9)	RSC for Results messages DDGEEEPUU, where DD=discipline, G=discipline's gender, EEE=event, P=phase, UU=unit
			DocumentCode can have many different values depending on the nature of the message. Each message defines the value for this header attribute.
DocumentSubcode	0	S(10)	Extension for the DocumentCode It is used when the RSC is not enough and it is required several different messages with the same RSC.
DocumentType	М	S(30)	Message Type (e.g. DT_RESULTS)
DocumentSubtype	0	S(20)	Attribute used to extend DocumentType for some messages.
Version	М	1 <u>V</u>	Version of the message
ResultStatus	0	CC @ResultSt atus	Status of the messages for results message
Language	0	CC @Languag e	Language of the content of the message. If the message accepts multilanguage and the attribute is not included, then by default the language is English If the message does not accept
			multi-language, then the attribute must not be included
FeedFlag	M	"P"- Production "T"-Test	Test message or production message.
Date	М	Date	Date when the message is generated, expressed in the local time zone where the message was produced.
Time	M	MillisTime	Time up to milliseconds when the message is generated, expressed in the local time zone where the message was produced.

LogicalDate	M	Date	Logical Date of events that extends until next day. If an event unit continues after midnight (24:00), all messages produced will be considered as happening at the logical date on which the event unit began (e.g. for a session which began at 21:00 on Aug 2 and ended at 1:20 on Aug 3, the output will be dated Aug 2). The end of the logical day is defined by default at 03:00 a.m. For messages corrections, like invalidating medals or Records, it will be the LogicalDate of the correction. Logical Date is expressed in the local time zone where the message
Venue	0	CC @VenueCo de	was produced. Venue where the message is generated.
RTSerial	0	Numeric	Sequence number for ODF-RT messages. RTSerial starts with 1 each Real Time session at every different venue.
Serial	М	Numeric	Sequence number for ODF-PiT messages. Serial starts with 1 each day session at every different venue. In the case of RT transmission, this attribute contains the last PiT message Serial number in order to ensure that RT information is processed over the last PiT information.

3.1.3. ODF Body

The next line after the ODF header is the body of the ODF Message.

Declaration	xml version="1.0" encoding="UTF-8"?					
Header	<odfbody documenttype=""></odfbody>					
	<competition code=""></competition>					
	← <competition> element</competition>					
Body						
	<message> Athlete nnnn disqualified ← <message> element</message></message>					

</Message>
</OdfBody>

Some important considerations for the ODF messages:

- Mandatory elements are sent always.
- Empty optional elements are not sent neither in ODF-PiT nor ODF-RT
- Mandatory attributes are sent always. If they have not value they are sent empty (Attribute ="")
- Empty optional attributes are sent either empty (Attribute = "") or not sent.
- Order of the elements inside an ODF message must be followed as defined in the ODF documentation. Elements must be sorted according what it is stated in the corresponding ODF message definition
- All elements in an ODF message are identified by one of the attributes (e.g. Code for an Competitor element) or a set of the attributes (e.g. Type + Code for an Extension element)
- ODF is being designed in such way that elements and attributes are organized to minimize redundancy and dependency. The objective is to isolate data so that additions, deletions, and modifications of an attribute can be made with just one message and then propagated through the rest of the messages via the defined references. However, in some very special circumstances, some important information (such as team members) will be repeated in order to make some message processing a little bit easier. Also, the ODF Light definition repeats some data across messages to simplify message processing to ODF Light Customers.
- ODF Light is a set of self-contained messages with the aim of simplifying the message processing to the clients as they do not have to resolve references

<Competition> Element

An ODF message contains a mandatory element <Competition>.

Elem	Attribute	M/O	Value	Comment
ent				
Com petiti on	Code	M	CC @Competition	Unique ID for the competition

<Message> Element

All ODF messages can have an optional element <Message> to include free non-formatted text in case more information is needed.

<Message> element follows the <Competition> element.

<Competitor> Element

ODF messages contain an optional element <Competitor> to include information for Athletes, Teams or Groups. Group is used when competitors of same or different organizations participate in an event together but they are not considered a team and their results are individuals.

Element	Attribute	M/O	Value	Comment
Competitor	Code	М	S(20) with no	Competitor's ID
			leading zeroes	
	Туре	М	T, A, G	T = Team
				A = Athlete
				G = Group

If Competitor is an Athlete:

- <Competitor> element contains the attribute Type = "A"
- <Competitor> element contains the attribute Code = AthleteID. This
 attribute links to an athlete appearing in the DT_PARTIC message.
- <Competitor> element contains the element <Composition>. This element is provided always.
- <Composition> element contains the mandatory element
 <Athlete>. Both codes in the <Athlete> and in the <Competitor> elements are the same, the AthleteID
- <Athlete> element contains the mandatory attribute Order with value 1.
- Athlete's Bib (if applicable) will be only sent in Competitor /Composition /Athlete element.
- Sport specific extensions are in the <Athlete> element and defined in the ODF Discipline Data Dictionary.

```
<Competitor Code= "A1" Type="A">
        <Composition>
        <Athlete Code="A1" Order="1"/>
        </Composition>
        </Competition>
```

If Competitor is a Team:

- <Competitor> element contains the attribute Type ="T"
- <Competitor> element contains the attribute Code = TeamCode.
 This attribute links to a team appearing in the DT_PARTIC_TEAMS message.
- <Competitor> element contains the element <Composition>. This
 element is optional because there are situations where the team
 members are not known when message is provided.

- <Composition> element contains the mandatory element <Athlete> with the list of athletes that are the team members. The Code attribute links to an athlete appearing in the DT_PARTIC (athletes) message.
- Although team members for the whole event will be able to be found in the DT_PARTIC_TEAMS message, the specific ODF Sport messages will also include always the team's members particularized for the message.
- <Athlete> element contains the mandatory attribute **Order** with the team members sort order.
- Team's **Bib** (if applicable) will be sent in Competitor element.
- Team members' Bib (if applicable) will be sent in Competitor /Composition /Athlete element.
- Team sport specific extensions are in the <Competitor> element and defined in the ODF Discipline Data Dictionary.
- Team members sport specific extensions are in the <Athlete> element and defined in the ODF Discipline Data Dictionary.

If Competitor is a Group:

- <Competitor> element contains the attribute Code = CGC when the athletes belong to the same organization, otherwise MIXn.
- There will be several Competitor /Composition /Athlete elements, containing the group competitor members.

3.2. ODF Data Types and Formats

This chapter describes data types and formats for the attributes in the ODF messages.

Format	Format Description
	Set of values included in the CodeEntity. CodeEntity is the name of the entity that identifies a particular set of codes.

Format	Format Description					
String	Text strings without a predetermined length					
S(n)	Text strings with a length of up to n characters					
Date	YYYYMMDD					
MillisTime	HHMMSSmmmHH: hourMM: minutes					
	 SS: seconds mmm: milliseconds 					
DateTime	All formatted with leading zeroes (example: 090303020). YYYY-MM-DDThh:mm:ssTZD (e.g.: 2006-02-06T13:00:00+01:00)					
	 YYYY: year MM: Month DD: day hh: hour Mm: minutes Ss: seconds TZD in the Time Zone Designator (Z or +hh:mm or -hh:mm) where the message was produced and when the message was produced. "Z" is the zone designator for the zero UTC offset 					
Boolean	'true' or 'false'					
Numeric	 If the number starts with 9 (e.g. 99), then leading zeroes are removed. Example: 10 in format 99 is 10, and 3 in format 99 is 3. If the number starts with 0 (e.g. 00), then leading zeroes are kept. Example: 10 in format 00 is 10, and 3 in format 00 is 03. If nothing is stated, it will be assumed that the leading zeroes are removed 					
N(n)	Number with a length up to n digits					
N(n).N(m)	 N(n) integer part up to n digits N(m) decimal part up to m digits 					
Specific pattern	Attributes with an specific pattern not specified in this table					
Free text	Free text is never used in a message attribute, but it can be used inside the element content					
	Example <element>Free text goes in here</element>					

3.2.1. Rules for rounding numbers

This chapter describes the rules for rounding numbers to use in all messages, unless other rules are specified in the sport documentation.

- Last digit in the number decimal part < 5 (0, 1, 2, 3, 4) → no rounding (i.e. 1,544 = 1,54)
- Last digit in the number decimal part >= 5 (5, 6, 7, 8, 9) → rounding up (i.e. 1,545 = 1, 55)

3.2.2. Measures format

This chapter describes the measure formats and the conversion rules to use in all messages, unless other formats or rules are specified in the sport documentation.

Measure	Measure Value Fo		Example
Height	N(1).N(2)m	9.00m	1.83m
	N(3)cm	900cm	183cm
	N(1)'N(2)"	9'09"	6'0"
Weight	N(3)kg	900kg	100kg
	N(3)lbs	900lbs	220lbs
Temperature	N(2)°C	90°C	35°C
	N(3)°F	990°F	95°F
Distance	N(3).N(3)km	90.000km	1.789km
	N(3).N(3)mi	90.000m	6.123mi
Speed	N(2).N(3)m/s	90.000m/s	1.789m/s
	N(3).N(3)mph	90.000mph	6.123mph
	N(3).N(3)km/h	90.000km/h	3.890km/h
Precipitation	N(2)cm	90cm	2cm
	N(2)in	90in	1in

3.2.3. Rules for measures conversion

This chapter describes measure the conversion rules to use in all messages, unless other rules are specified in the sport documentation.

Measure	Conversion Rules				
Distance	1 in = 0,0254 m				
	1 ft = 12 in = 0,3048 m				
	1 yd = 3 ft = 36 in = 0,9144 m				

Measure	Conversion Rules					
	1 mi = 1.760 yd = 5.280 ft = 63360 in = 1609,344 m					
	1 nmi (nautical mile) = 1,852 m					
Speed	1 km/h = 3.6 m/s					
	1 kts= 1 nmi/h					
Weight	1 lbs = 0,453 592 37 kg					
Temperature	$T[^{\circ}F] = 1.8 \times T[^{\circ}C] + 32$					
	$T[^{\circ}C] = (T[^{\circ}F] - 32) / 1.8$					

3.3. ODF Message Update

An update occurs when it is received a message whose identification is coinciding with the identification of an already received message.

Message identification is the combination of the header attributes: DocumentCode + DocumentSubcode + DocumentType + DocumentSubtype.

ODF PIT:

The latest message substitutes completely the previous received message.

There are specific messages, (with an UPDATE suffix) for updating some elements and keep the rest of the message, e.g. DT_SCHEDULE_UPDATE, DT_PARTIC_UPDATE, DT_PARTIC_TEAMS_ UPDATE or DT_PARTIC_HORSES_UPDATE.

ODF RT:

When the message header contains the attribute **ResultStatus** = LIVE_FULL or LIVE_LAST or LIVE_MANDATORY, the latest message substitutes completely the previous received message.

When the message header contains the attribute **ResultStatus** = LIVE_UPDATE, only the elements and attributes in the new message must be updated by message receiver. Elements and attributes provided before must be kept by message receiver.

 New message only includes the changed attributes, with the exception of the mandatory attributes that are always sent even if there is no modification.

When an attribute sent in the past has no value anymore, send the same message with ResultStatus=LIVE_MANDATORY and

- If the attribute is mandatory send it empty (Attribute="")
- If the attribute is optional either do not send it or send it empty

4. Point in Time Feed

4.1. Central Messages

4.1.1. Overall Perspective

The following table lists the ODF central messages, with their types and their names

Message Type	Message name
DT_SCHEDULE	Competition schedule
DT COLUED III E LIDDATE	
DT_SCHEDULE_UPDATE	Competition schedule update
DT PARTIC	List of participants by discipline
_	
DT_PARTIC_UPDATE	List of participants by discipline update
DT_PARTIC_TEAMS	List of teams
DT_PARTIC_TEAMS_UPDATE	List of teams update
DT_MEDALS	Medal standings
DT_MEDALLISTS_DAY	Medallists of the day
DT_HISTORIC_RECORD	Historical records
DT_GLOBAL_GM	Global good morning
DT_GLOBAL_GN	Global good night
DT_BCK	Background publish report
DT_BCK_UPDATE	Background unpublish report
DT_BCK_IMP	Background import report
DT_BIO_PAR	Biography (published) of one Participant
DT_BIO_PAR_UPDATE	Update/Unpublish Biography of one Participant
DT_BIO_PAR_IMP	Import Biography of one Participant
DT_BIO_TEA	Biography (published) of one Team
DT_BIO_TEA_UPDATE	Update/Unpublish Biography of one Team
DT_BIO_TEA_IMP	Import Biography of one Team
DT BIO NOC	Biography (published) of one CGF
DT_BIO_NOC_UPDATE	Update/Unpublish Biography of one CGF
DT_BIO_NOC_IMP	Import Biography of one CGF
DT_BNW	Breaking News report
DT_BNW_UPDATE	Breaking News report update/Unpublish
DT_NEWS	News' published report
DT_NEWS_UPDATE	News' report update/Unpublish

DT_NEWS_IMP	Import News' report			
DT_TRS	Transport's publish report			
DT_TRS_UPDATE	Transport's report update/Unpublish			
DT_TRS_IMP	Import Transport's report			
DT_ESL	Extended Start List			
DT_PIC	Picture message			
DT_PIC_UPDATE	Picture message update			
DT_NOTIFICATION	Notification of availability of online document			
DT_SCHED_RES_NOC	Results and schedule of a CGF for single competition day			

Each discipline using a message will have to adapt in its ODF document the general presentation of the message: some of the definitions will have to be extended and some overwriten, depending on the sport's specific requierements.

The following situations can occur:

Situation 1:

When one discipline must extend in its ODF document a particular element of the message definition (e.g.: the header of the message). If this extension is not done, the definition of the message for that sport will not be complete. This extension is considered mandatory for the sport that makes use of this particular message.

Situation 2:

When the message's general definition contains elements that can be overwriten (e.g.: its trigger and frequency). If there are no specific requierements for the sport using the message the general rule of the message as described in this document should be followed. Situation 3:

Situation 3:

When one message could be extended by the use of optional message elements, which should not be included in general, unless it is specifically requested for a particular sport in its ODF Sport Data Dictionary document.

Situation 4:

When the definition of one message could also be extended by the inclusion of optional attributes (otherwise not necessary according to their general definitions), or by redefining the rule that describes when these attributes should be included. However, some mandatory attributes can be redefined in each one of the ODF Sport Data Dictionary document.

For the message definition: The ODF Sport Data Dictionary will redefine the general definition of the needed message according to the related sport's specific requierements:

 Triggers and Frequency: for some messages, the redefinition will be Mandatory.

- Message Structure: for a specific sport can be redefined to include optional elements
- Message Values: for a specific sport it is possible to redefine the optional attributes or overwrite the required attributes. All the attributes defined in this document with the comment "See table comment" must be redefined in the ODF Sport Data Dictionary document of the sport using them.

The following table presents the relation between the messages and the redefinition need of its parts (Trigger and Frequency, Structure and Values) in the ODF Sport Data Dictionary document.

Redefinition	Trigger and Frequency	Message Structure	Message Values
(in Message Type vs. Message Parts)		(message elements)	(message attributes)
DT_SCHEDULE			
DT_SCHEDULE_UPDATE			
DT_PARTIC		0

M For mandatory definition

4.1.2. Competition schedule

4.1.2.1. Description

Competition schedule is a bulk message provided for one particular discipline. As a general rule, it contains schedule information for all event units needed to run a competition and excludes event units for activities such as unofficial training and press conferences.

In deciding which event units to include, consider the following:

- 1. "schedule" flag in the ODF Common Codes
 - Include event units that have the ODF Common Codes flag for "schedule" set to "Y".

2. Status

• Exclude event units with a status of planned (Status="1") unless a planned event unit must be sent to change a scheduled event unit (Status="2") into a planned event unit (Status="1").

The arrival of the competition schedule message resets all the previous schedule information for one particular discipline.

4.1.2.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment			
DocumentCode	DD0000000	DD should be defined according to CC			
		@Discipline			
DocumentType	DT_SCHEDULE	Competition schedule bulk			
Version	1V	Version number associated to the message's			
		content. Ascendant number			
FeedFlag	"P"-Production	Refer to the ODF header definition			
	"T"-Test	1.0.0.10 1.0.0 0.2.1 1.000.00.1 0.011111011			
Date	Date	Refer to the ODF header definition			
Time	MillisTime	Refer to the ODF header definition			
LogicalDate	Date	Refer to the ODF header definition			
<mark>Venue</mark>	CC @VenueCode	Venue code where the message is being			
		generated			
Serial	Numeric	Refer to the ODF header definition			

O For optional definition

Blank when the definition is the same that the general definition

4.1.2.3. Trigger and Frequency

The competition schedule will be sent as a bulk message (DocumentType="DT_SCHEDULE") approximately 1 month before the Games and then sent multiple times until a date to be confirmed after which only update messages will be sent (DocumentType="DT_SCHEDULE_UPDATE").

4.1.2.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition							
•	Code						
	Discipline						
	'	Code					
		Gender					
		(1N)					
			Code				
			Event				
			(1N)				
			, ,	Code			
				Phase (1N)			
					Code		
					Туре		
					Unit (1N)		
					Ì	Code	
						Status	
						StartDate	
						Estimated	
						StartDate	
						EndDate	
						Estimated	
						EndDate	
						Medal	
						Venue	
						Location	
						SessionT	
						уре	
						Estimated	
						StartText	
						(0N)	
							Language
							Value
		1				ItemNam	
						e (0,N)	
							Language

						Modificati	
						onIndicat	
						or (see	
		1				Table	
			<u>. </u>	and "Competition	L	Note)	

Table Note: "Competition schedule" and "Competition schedule update" share the same message structure and message attributes, except for the ModificationIndicator attribute, which is specific of the "Competition schedule update message".

4.1.2.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition

Element	Attribute	M/O	Value	Comments
Discipline	Code	M	CC @Discipline	Discipline Code
Gender	Code	M	CC @DisciplineGend er	Discipline Gender Code
Event	Code	М	CC @Event	Event ID
Phase	Code	М	CC @Phase	Phase ID
	Туре	M	CC @PhaseType	Include the phase type for those competition, official training phases, Technical Meetings, Medal / Flower Ceremonies and Draw phases
Unit	Code	M	CC @Unit	Unit ID
	Status	M	CC @UnitStatus	Unit Status(Except the planned status in the case of the bulk message)
	StartDate	0	DateTime	Start date. This attribute may not be sent in the case of some Unit@Status, such as those meaning cancelled, postponed. Example: 2006-02-26T10:00:00+01:00
	EstimatedStartDate	0	Boolean	'true' if StartDate (scheduled start time) is an estimation. 'false' if StartDate (scheduled start time) is not an estimation. Start times of some units depend on the finalisation of previous event units, where the duration of the previous event unit is fixed. In this case, the start time is set to estimate. When the previous event unit finishes, then this flag is always set to false. This attribute may not be sent in the case of some Unit@Status, such as those meaning cancelled, postponed. However, it will be always sent whenever @StartDate is informed. In case of this attribute is 'true' the StartDate attribute normaly is used for sorting.
	EndDate	0	DateTime	End date. This attribute may not be sent in the case of some Unit@Status, such as those meaning cancelled, postponed. Example: 2006-02-26T10:00:00+01:00
[2000 02 201 10.00.00T01.00

Flow sut	Attailanta	N#/0	Value	Comments
Element	Attribute	M/O	Value	Comments
	EstimatedEndDate	0	Boolean	'true' if EndDate scheduled end time is estimation.
				'false' if EndDate scheduled end time is not an estimation.
				Some event units have a scheduled end time well bounded, however, some event units in some circumstances have a scheduled end time not quite variable (example, some press conferences, etc.). When the EndDate scheduled end time is finally known, this flag is always set to false.
				This attribute may not be sent in the case of some Unit@Status, such as those meaning cancelled, postponed. However, it will be always sent whenever @EndDate is informed.
	Medal	M	CC @UnitMedalType	Gold medal event unit, bronze medal event unit, or no medal event unit
	Venue	M	CC @VenueCode	Venue where the unit takes place
	Location	M	CC @Location	Location where the unit takes place
	SessionType	0	CC@SessionTyp e	Session type of the Event Unit (i.e. Morning, Afternoon, etc.) This attribute is only used for Competition Schedules
	ModificationIndicato r	N/A	N/A	Only needed in the Competition Schedule update message
Unit/ EstimatedStart Text This element is only used for Competition Schedules	Language	М	CC @Language	Code Language of the @Value
	Value	M	S(20)	Text that explains in the case that StartDate is an estimation which is the Start Time (i.e. "After M.1")
Unit/	Language	M	CC @Language	Code Language of the @Value
This element is only used for Non Competition Schedules in case that this Unit are not in the common codes	Value	M	S(40)	Item Name

4.1.2.6. Message sort

The message is sorted by Unit@StartDate.

In case of event unit with no Unit@StartDate defined (example, they are in an event unit status such as planned), they will be listed at the end of the message. In this case, the sorting will be according to Discipline@Code, Gender@Code, Event@Code, Phase@Code and Unit @Code

4.1.3. Competition schedule update

4.1.3.1. Description

Competition schedule update is an update message. It is <u>not</u> a complete schedule information message, but only the schedule data being modified.

The arrival of this message updates the previous schedule information for one particular event unit, but does not notify any other change for the rest of the event units except for those arriving in the message.

The key of the information updated consists of the following attributes: Discipline @Code, Gender @Code, Event @Code, Phase @Code, Unit @Code. Therefore, any new unit, deleted unit or updated unit will be identified by all these attributes

The data to be sent follows the DT_SCHEDULE rules in relation to phase type and status (except where changing to status 1 as seen below)

It has to be considered, anyway, that if one DT_SCHEDULE message arrives, then all previous DT_SCHEDULE_UPDATE messages should be discarded.

4.1.3.2. Header Values

The following table describes the ODF header attributes

Attribut	Value	Comment
е		
DocumentCode	DD0000000	DD should be defined according to
		CC @Discipline
DocumentType	DT_SCHEDULE_U	Competition schedule update
	PDATE

4.1.3.3. Trigger and Frequency

This message should be triggered at any time there has been a competition schedule modification for any previously sent competition schedule bulk message.

4.1.3.4. Message Structure

The message structure of the competition schedule update message is the same as the competition schedule message, but adding the attribute ModificationIndicator, which is detailed in the next section

4.1.3.5. Message Values

All message attributes are the same as the competition schedule message, but including the attribute defined below

Element	Attribute	M/O	Value	Comments
Unit	ModificationIndicator	M	N, U, D	N-New event unit U-Update event unit D-Delete event unit If ModificationIndicator='N', then include new event unit to the previous bulk-loaded schedule If ModificationIndicator='U', then update the event unit to the previous bulk-loaded schedule If ModificationIndicator='D', then delete the event unit from the previous bulk-loaded schedule. The unit (identified by Discipline, Gender, Event, Phase and Unit) with ModificationIndicator='D' does not exist any more.

4.1.3.6. Message sort

The message is sorted by Unit@StartDate.

In case of event unit with no Unit@StartDate defined (example, they are in an event unit status such as planned), they will be listed at the end of the message. In this case, the sorting will be according to Discipline@Code, Gender@Code, Event@Code, Phase@Code and Unit @Code.

4.1.4. List of participants by discipline / List of participants by discipline Update

4.1.4.1. Description

A participant is considered as an individual competitor (type athlete, participating or not in the current games) or as an official in one or several disciplines or as a competitor being part of a team (team member).

Although the participant participates in more than one event or more than one discipline, this message just contains all the information for

Point in Time Feed

the discipline of the message, although listing the information of all the events for that discipline.

This message includes historical athletes that do not participate in the current competition. Historical athletes will not be registered to any event.

It is important to point out that all the sport messages that make references to athletes (start list, event unit results, etc.) will always match the athlete ID with the athlete ID as it is being sent in the List of athletes by discipline message. The historical athletes will be used to match historical athlete information as it is in the records message when sending the previous record information and this previous record was an historical record not being broken in the current competition.

This message also includes the historical team members of the historical teams' messages. It could happen these historical athletes would appear in this message just for this reason (being part of historical teams).

List of participants by discipline (DT_PARTIC) is a bulk message, provided for each discipline. It is a complete participant information message for one particular discipline. The arrival of this message resets all the previous participants' information for one particular discipline. This message can include a list of current athletes, officials, coaches, guides, technical officials, Reserves and historical athletes.

List of participants by discipline update (DT_PARTIC_UPDATE) is an update message. It is <u>not</u> a complete list of participants' information by discipline message, <u>only</u> the participant data being modified, i.e. if some data of one participant change, the element Participant for it with all its children ant its attribute must me send.

The key of the information updated consists of the following attribute: Participant @Code. Therefore, any new or updated Participant Discipline-Event will be identified by all these attributes.

4.1.4.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment		
DocumentCode	DD0000000	DD is defined according to		
		CC @Discipline		
DocumentType	DT_PARTIC /	List of participants by		
	DT_PARTIC_UPDATE	discipline

FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition

4.1.4.3. Trigger and Frequency

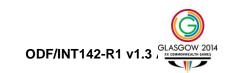

The DT_PARTIC message is sent as a bulk message one month before the Games. It is sent several times up to the date from what only DT_PARTIC_UPDATE messages are sent.

The DT_PARTIC_UPDATE message is triggered when there is a modification in a DT_PARTIC bulk message sent before.

4.1.4.4. Message Structure

The following table defines the general structure of the Participants message. Elements with minimum cardinality 0 (or optional elements) may not apply for a specific sport.

Level 1	Level 2	Level 3	Level 4	Level 5	Level 6

4.1.4.5. Message Values

Competition Element

Element	Attribute	M/O	Value	Comments
Competition	Code	M	CC	Unique ID for competition
			@Competition	

Participant Element

Participant Element						
Element	Attribute	M/ O	Value	Comments		
Participant	Code	M	S(20) with no leading zeroes	Participant's ID. It identifies an athlete or an official and the holding participant's valid information for one particular period of time. It is used to link other messages to the participant's information. Participant's information (example @Organisation) will not be the latest for the athlete/official, unless the @Code attribute is the same as the @Parent attribute. However, this information could be the one being valid in the particular moment of a start list, event unit results, etc. When the participant is an historical one, then this ID will start with "A" when it is an Athlete, "C" when Coach and "O" when Official.		

Element	Attribute	M/	Value	Comments
		0		
	Parent	M	S(20) with no leading zeroes	Participant's parent ID, which is used to link to the latest valid information for one participant. @Parent attribute should be linked to the latest participant's information, by retrieving that Athlete/Official whose @Code attribute is the same as @Parent.
				The participant containing @Code attribute being the same as the @Parent attribute will be the one with the latest information for the participant.
	Status	Mo O	CC @ AccreditationSta tus	Participant's accreditation status this atribute is Mandatory in the case of @Current="true" and it is optional in the case that @Current="false". To delete a participant, a specific value of the Status
	GivenName	0	S(25)	attribute is used. Given name in WNPA
	FamilyName	M	S(25)	format (mixed case) Family name in WNPA format (mixed case)
	PrintName	M	S(35)	Print name (family name in upper case + given name in mixed case)
	PrintInitialName	M	S(18)	Print Initial name (for the given name it is sent just the initial, without dot)
	TVName	М	S(35)	TV name
	TVInitialName	М	S(18)	TV initial name
	Gender	М	CC @PersonGender	Participant's gender
	Organisation	M	CC @Organisation	Organisation ID

Flomont	Attributa	RA/	Value	Comments
Element	Attribute	M/ O		Comments
	BirthDate	0	YYYYMMDD	Date of birth. This information could be not known at the very beginning, but it will be completed for all participants after successive updates
	Height	0	N(3) 999	Height in centimetres. It will be included if this information is available. This information is not needed in the case of officials/referees.
	Weight	0	N(3) 999	Weight in kilograms. It will be included if this information is available. This information is not needed in the case of officials/referees.
	PlaceofBirth	0	S(75)	Place of Birth
	CountryofBirth	0	CC @Country	Country ID of Birth
	PlaceofResiden ce	0	S(75)	Place of Residence
	CountryofResid ence	0	CC @Country	Country ID of Residence
	Nationality	0	CC @Country	Participant's nationality. Although this attribute is optional, in very exceptional situations it will not be known, and for this reason not ready to be sent.
	MainFunctionId	O/ M	CC @Function	Main function In the Case of Current="true" this attribute is Mandatory
	Current	M	boolean	It defines if a participant is participating in the games (True) or is a Historical participant (False)
	OlympicSolidari ty	0	Y or N	Flag to indicating if the participant participates in the Olympic Movement program

Element	Attribute	M/ O	Value	Comments
	ModificationIndic ator	M	N, U	N-New participant (in the case that this information comes as a late entry) U-Update participant
				ModificationIndicator=' N', then include new participant to the previous bulk-loaded list of participants

4.1.4.6. Message sort

The message is sorted by Participant @Code

4.1.5. List of teams / List of teams update

4.1.5.1. Description

DT_PARTIC_TEAMS contains the list of teams related to the current competition.

A team is a type of competitor, being a group of two or more individual athletes participating together in one event. Pairs (tennis, figure skating, etc.) are also defined as team of two competitors. One team participates in one event of one discipline. When one team participates in multiple events, there will be one team for each event for the same group. Also when the same organisation participates in the same event twice, there will different teams.

An historical team can be defined as a group of athletes (team members) competing in the past in a competition event for an organisation. The historical team members appearing in this message will be listed in the list of historical athletes' messages. The list of historical teams just associates historical team members with the corresponding historical teams. Historical teams will not be registered to any event.

For equestrian one athlete and one horse are not considered a team.

List of teams (DT_PARTIC_TEAMS) is a bulk message by discipline. The list is always complete. The arrival of this message resets all the previous participant teams' information for that discipline. It is assumed that all teams appearing in this list are valid, in the meaning that they are participating or they could participate in one event.

List of teams update (DT_PARTIC_TEAMS_UPDATE) is an update message. It is <u>not</u> a complete list of teams' information message. It only contains the team data being modified.

The key of the information updated consists of the following attribute: Team @Code. Therefore, any new or updated Team Discipline-Event will be identified by all these attributes.

4.1.5.2. Header Values

The following table describes the ODF header attributes

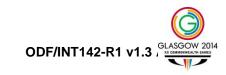

Attribute	Value	Comment
DocumentCode	DD0000000	DD is defined according to CC @Discipline
DocumentType	DT_PARTIC_TEAMS_UPDATE / DT_PARTIC_TEAMS	List of participant teams
Version	1V	Version number associated to the message's content. Ascendant number
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition

4.1.5.3. Trigger and Frequency

The DT_PARTIC_TEAMS message is sent as a bulk message one month before the Games. It is sent several times up to the date from what only DT_PARTIC_TEAMS_UPDATE messages are sent.

The DT_PARTIC_TEAMS_UPDATE message is triggered when there is a modification in a DT_PARTIC_TEAMS bulk message sent before.

4.1.5.4. Message Structure

The following table defines the general structure of the Teams message. Elements with minimum cardinality 0 (or optional elements) may

not apply for a specific sport.

Level 1	Level 2	Level 3	Level 4	Level 5	Level 6
Competition

4.1.5.6. Message sort

The message is sorted by Team @Code.

4.1.6. Medal standings

4.1.6.1. Description

The medal standings table contains the official medal standings up to the moment of the message generation for all the organisations that were awarded with a medal.

"Medal standings" is a bulk message, provided for all disciplines. It is a complete medal standings message.

The arrival of this message resets the entire previous medals table's information.

4.1.6.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	GL0000000	Global message for all disciplines
DocumentType	DT_MEDALS	Medal standings
Version	1V	Version number associated to the message's content. Ascendant number
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

4.1.6.3. Trigger and Frequency

"Medal standings" is sent as soon as one new medal is officially awarded for any of the events that make part the competition schedule. As the competition progresses, successive changes in the medals' information are made. Therefore, it will be that this message is resent several times, as result of the normal operation. In this case, it has to be assumed that the message resets the complete previous medals' information.

4.1.6.4. Message Structure

The following elements describe the message structure from the OdfBody element.

4.1.6.6. Message sort

Message should be sorted by the SortRank @Value attribute

4.1.7. Medallists of the day

4.1.7.1. Description

The "medallists of the day" contains the list of medallists awarded during the current logical day.

The "medallists of the day" message is a complete message that increments its content as more medals are being awarded during the day. The arrival of this message resets the entire previous "medallists of the day" information.

The message is not by discipline, but it could contain several disciplines.

4.1.7.2. Header Values

The following table describes the ODF header attributes (the DocumentSubtype attribute is used to identify the message along with the DocumentCode and DocumentType attributes).

Attribute	Value	Comment
DocumentCode	GL0000000	It is a global message for all the disciplines
DocumentType	DT_MEDALLISTS_DA Y	Medallists by day

DocumentSubtype	YYYYMMDD	Refer to the ODF header definition
Version	1V	Version number associated to the message's content. Ascendant number
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition
<mark>Venue</mark>	CC @ VenueCode	Venue code where the message is being generated

4.1.7.3. Trigger and Frequency

"Medallists by day" is sent at the end of the current day (Logical Date) with the officials medals know for today.

In case that some medal of the previous days changes, it will send a new version of this (for the DocumentSubtype corresponding) as soon as possible.

4.1.7.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition

4.1.7.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for
				competition
Discipline	Code	M	CC @Discipline	Discipline Code
	TotalEvents	0	Numeric	Total number of competition events (events that award medals) Mandatory in the case of DT_MEDALLISTS_DI
	FinishedEvents	0	Numeric	SCIPLINE Number of competition events that have awarded a type of medal, out of the total Mandatory in the case of DT_MEDALLISTS_DISCIPLINE
Gender	Code	M	CC @DisciplineGender	Discipline Gender Code
Event	Code	М	CC @Event	Event ID
	Date	0	YYYYMMDD	Date of the Gold medal match Mandatory in the case of DT_MEDALLISTS_DI SCIPLINE
Medal	Code	М	CC @MedalType	Medal type gold, silver or bronze All the Competitors with the same CC@MedalType must be not grouped in the same element (it applies in the equalled medals)
	Code	M	S(20) with no leading zeroes	Competitor's ID
Competitor	Туре	M	T, A	T for team A for athlete
	Order	M	Numeric	Competitor order (Send 1 by default) and in the case of tie the order will be defined for the IOC rules

Element	Attribute	M/O	Value	Comments
O a mana a iti a m	Code	М	S(20) with no leading zeroes	Individual athlete's ID (if Competitor @Type="A" or team member's ID (if Competitor @Type="T"").
Composition /Athlete	Order	M	Numeric	Team member order for medal (according to each different sport rule) Send 1 if individual medal

4.1.7.6. Message sort

Events in the message will be sorted by discipline code, gender code and event code.

Within an event, medals will be sorted by medal type. Moreover, in case of tie or for the team's athletes, the order will be according to a medal order (given by each sport rule).

4.1.8. Historical records

4.1.8.1. Description

The "historical records" is a message that lists the records broken in previous Competitions.

4.1.8.2. Header Values

The following table describes the ODF header attributes.

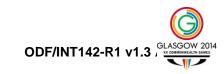

Attribute	Value	Comment
DocumentCode	DD0000000	DD should be defined according
		to CC @Discipline
DocumentType	DT_HISTORIC_RECORD	Historical records
Version	1V	Version number
FeedFlag	"P"-Production	Refer to the ODF header
	"T"-Test	definition
Date	Date	Refer to the ODF header
		definition
Time	MillisTime	Refer to the ODF header
		definition
LogicalDate	Date	Refer to the ODF header
		definition

Serial	Numeric	Refer to the ODF header
		definition

4.1.8.3. Trigger and Frequency

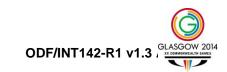

"Historical records" are sent only once with a bulk message when the information is available before the competition starts. A new version of this message substitutes previous historical record information.

Message Structure 4.1.8.4.

The following table defines the general structure of the Historical Records message. Elements with minimum cardinality 0 (or optional elements) may not apply for a specific sport.

# 4.1.8.6. Message sort

Sort by Record @Code attribute and then by RecordType @Code attribute.

### **ODF/INT142-R1 v1.3 APP**

# 4.1.9. Global good morning

### 4.1.9.1. Description

The "global good morning" is a message to indicate the start of day of the operations for all the disciplines with some kind of competition within a logical day. All the messages defined in this document should send between DT_GLOBAL_GM/DT_GLOBAL_GN messages.

### 4.1.9.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	GL0000000	It is a global message for all the
		disciplines
DocumentType	DT_GLOBAL_GM	Global good morning
Version	1V	Version number associated to the message's content. Ascendant number
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

# 4.1.9.3. Trigger and Frequency

"Global good morning" is sent as soon as the operations for one particular logical day are about to begin, and always before any other message for that logical day.

## 4.1.9.4. Message Structure

The message structure just includes a OdfBody element (with their ODF header attributes, but no other hierarchical element below OdfBody).

### 4.1.9.5. Message Values

There are not attributes to be defined in this message.

# **4.1.9.6.** Message sort

There is no sort order for this message.

### 4.1.10.Global good night

## 4.1.10.1. Description

Olympic Data Feed - © IOC Global good morning

### **ODF/INT142-R1 v1.3 APP**

The "global good night" is a message to indicate the end of day of the operations for all the disciplines with some kind of competition within a logical day.

### 4.1.10.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment	
DocumentCode	GL0000000	It is a global message for all the disciplines	
DocumentType	DT_GLOBAL_GN	Global good night	
Version	1V	Version number associated to the message's content. Ascendant number	
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition	
Date	Date	Refer to the ODF header definition	
Time	MillisTime	Refer to the ODF header definition	
LogicalDate	Date	Refer to the ODF header definition	
Serial	Numeric	Refer to the ODF header definition	
<mark>Venue</mark>	CC @VenueCode	Venue code where the message is being generated	

# 4.1.10.3. Trigger and Frequency

"Global good night" is sent as soon as the operations for one particular logical day are finished, to formally indicate the end of that logical day.

# 4.1.10.4. Message Structure

The message structure just includes a OdfBody element (with their ODF header attributes, but no other hierarchical element below OdfBody).

### 4.1.10.5. Message Values

There are not attributes to be defined in this message.

# **4.1.10.6.** Message sort

There is no sort order for this message.

# 4.1.11.Background document

# 4.1.11.1. Description

A Background document message is considered as a unique document of background.

The arrival of this message <u>resets the previous Background</u> document.

### 4.1.11.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment		
DocumentCode	S(9)	RSC with the following format: DD00000000		
		Where: DD – Discipline assosicated to the background item		
DocumentSubCode	Numeric	Unique identifier for each background item		
DocumentType	DT_BCK	Type of BCK documents		
Version	1V	Version number associated to the message's content. Ascendant number		
Language	CC @Language	Language code		
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition		
Date	Date	Refer to the ODF header definition		
Time	MillisTime	Refer to the ODF header definition		
Serial	Numeric	Refer to the ODF header definition		
Venue	CC @VenueCode	Venue code where the message is being generated		

### 4.1.11.3. Trigger and Frequency

Background document wil be sending every time that the document is published.

# 4.1.11.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition			
	Code		
	Document		
		Parent	
		Category	
		CategoryName	

ReportType		
ReportTypeName		
SortOrder		
FileName		
ReportFormat		
ModificationIndicato r (see Table Note)		
Title		
	-	
Body		
	-	

Table Note: "Background document message" and "Background document update message" share the same message structure and message attributes, except for the ModificationIndicator attribute, which is specific of the "Background document update message".

### 4.1.11.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition
Document	Parent	М	Numeric ¹	Unique identifier of parent document. If the report has no parent ID then it takes value 0
	Category	M	CC @Category	Category code of application
	Category Name	M	S(40)	Category Name
	ReportType	М	<mark>S(3)</mark>	Report Type code of application
	ReportType Name	М	S(40)	Report Type Name
	SortOrder	0	S(8)	This field identifies the Sort order associated to the report. Value to be defined by the Committee.
	FileName	M/O	S(10)	This field identifies the filename of the report. This is only Mandatory for DT_BCK_IMP

¹ Parent: background documents are originally created in English. If Press Operation staff considers interesting translating any report, the translations can be created from the English one. For translated items Parent element is the DocumentSubcode of the English version. Example: English version → DocumentSubcode ="1230"

French translation → Parent="1230"

Element	Attribute	M/O	Value	Comments
	ReportFormat	M	S(1)	This field identifies the format of the report. The possible values are:  "H" for HTML Reports.  "P" for PDF Reports.
Document/Title	-	М	S(100)	Text describing Document Title
Document/Body	-	M	Free text	Accordingly to the ReportFormat field the body element will contain:  In the case of "H" (HTML Report) the value will be the RTF text containing the Body of the HTML report.  In the case of "P" (PDF Report) the value will be the PDF report encoded in Base64.

# 4.1.11.6. Message sort

The message is not sorted.

# 4.1.12.Background document update

## 4.1.12.1. Description

Background document update is an unpublish message of one publish document. If the document is published only the action delete/unpublish can be do it. Note: if one Document is deleted/unpublished all others BCK documents that have it as Parent they also will be deleted/unpublished.

The key of the information updated consists of the following attribute: DocumentSubCode.

.

² The information provided should be codified in UTF-8.

### 4.1.12.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment		
DocumentCode	S(9)	RSC with the following format: DD00000000  Where: DD - Discipline assosicated to the background item		
DocumentSubCode	Numeric	Unique identifier for each background item		
DocumentType	DT_BCK_UPDATE	Type of BCK documents		
Version	1V	Version number associated to the message's content. Ascendant number		
Language	CC @Language	Language code		
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition		
Date	Date	Refer to the ODF header definition		
Time	MillisTime	Refer to the ODF header definition		
Serial	Numeric	Refer to the ODF header definition		
Venue	CC @VenueCode	Venue code where the message is being generated		

### 4.1.12.3. Trigger and Frequency

Background update document will be sending every time that this document is unpublished.

### 4.1.12.4. Message Structure

The message structure of the Background document update message is the same as the Background document message, but adding the attribute ModificationIndicator, which is detailed in the next section.

The elements Title and Body will be not required in the case of delete/unpublish documents.

# 4.1.12.5. Message Values

All message attributes are the same as the backgroung document message, but including the attribute defined below

Element Attribute	M/O	Value	Comments	
-------------------	-----	-------	----------	--

M/O	Value	Comments
tor M	D	D – Delete/Unpublish BCK document  If ModificationIndicator='D', then delete the document to the previous BCK document.

### 4.1.12.6. Message sort

The message is not sorted.

# 4.1.13.Background Import document

### 4.1.13.1. Description

A Background import document message is considered as a unique document of background.

The arrival of this message resets the previous Background document.

### 4.1.13.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	Numeric	Unique identifier for each background item.
DocumentType	DT_BCK_IMP	Type of BCK documents
Version	1V	Version number associated to the message's content. Ascendant number
Language	CC @Language	Language code
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition

### 4.1.13.3. Trigger and Frequency

Background import document will be sending a few months before games.

# 4.1.13.4. Message Structure

The message structure of the Background import document message is the same as the Background document message.

### 4.1.13.5. Message Values

All message attributes are the same as the background document message.

### 4.1.13.6. Message sort

The message is not sorted.

# 4.1.14. Participant's Biography

### 4.1.14.1. Description

The Participant's Biography is a message containing the biography of one individual participant. The participant could be an athlete, an official, coach or a team member. The participant will have always assigned at least one discipline, although it could be more than one.

The message resets the previous Participant Biograpy information. There is only one participant per message.

### 4.1.14.2. Header Values

Attribute	Value	Comment	
DocumentCode	DDGTYP000	DD – Discipline	
		G – Gender	
		TYP – Participant Type	
		(ATH, COA, OFF).	
		For example ATMCOA000:	
		Athletics Man Coach	
DocumentSubCode	S(20) with no leading	Participant's ID	
	zeroes		
DocumentType	DT_BIO_PAR	Participant's Biography	
DocumentSubtype	Code	Description	
	MEDIUM	Medium biography (for ATH or COA only)	
	COMPLETE	Complete biography (for ATH, COA or OFF)	
Version	1V	Refer to the ODF header definition	
Language	S(3)	Language related to the content of the message.	
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition	
Date	Date	Refer to the ODF header definition	
Time	MillisTime	Refer to the ODF header definition	
Serial	Numeric	Refer to the ODF header definition	

Venue	CC @VenueCode	Venue code where the
		message is being
		generated generated

## 4.1.14.3. Trigger and Frequency

Participant's Biography messages will be available the first day of the press operation. These messages are sent the first time including the complete bulk information known up to that moment.

### 4.1.14.4. Message Structure

The attribute DocumentSubtype in the Header determines if a biography is MEDIUM or COMPLETE.

For Athletes (ATH), the following elements are included in the COMPLETE biography (not in MEDIUM biography):

- Participant/CHighlights
- Participant/GInterest/AddInformation
- Participant/GInterest/Debut
- Participant/GInterest/Injuries
- Participant/GInterest/PreviousOlympics

For Coaches (COA), the following elements are included in the COMPLETE biography (not in the MEDIUM biography):

• Participant/GInterest/AddInformation element

The following optional elements must be included, if the message is for an ATH, a COA or and OFF:

For ATH or COA: CHighlightsFor OFF: OfficialFunction

Venue	CC @VenueCode	Venue code where the message is being generated	

# 4.1.15.3. Trigger and Frequency

Trigger any time there has been a participant's biograpy modification or biography's delete / unpublish.

## 4.1.15.4. Message Structure

The message's structure is the same as the Participant's Biography message, but adding the attribute ModificationIndicator, which is detailed in the next section.

# 4.1.15.5. Message Values

All message attributes are the same as the Participant's Biography message, but including the attribute defined below

Element	Attribute	M/O	Value	Comments
Participant	ModificationIndicator	М	U, D	U - Update biography D – Delete, Unpublish Biography

# 4.1.15.6. Message sort

There is not a specific sorting for this message.

# 4.1.16. Participant's Biography Import

## 4.1.16.1. Description

The Participant's Biography Import is a message containing the biography of one individual participant. The participant could be an athlete, an official, coach or a team member. The participant will have always assigned at least one discipline, although it could be more than one.

The message resets the previous Participant's Biography Import information. There is only one participant per message.

### 4.1.16.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment	
DocumentCode	S(20) with no leading zeroes	Participant's external ID. This ID will start with "A" for Athletes, "C" for Coaches and"O" for Officials.	
DocumentSubCode	ATH, COA, OFF	ATH – Athlete COA – Coach OFF – Official	
DocumentType	DT_BIO_PAR_IMP	Participant's Biography Import	
Version	1V	Refer to the ODF header definition	
Language	CC @Language	Language related to the content of the message.	
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition	
Date	Date	Refer to the ODF header definition	
Time	MillisTime	Refer to the ODF header definition	
Serial	Numeric	Refer to the ODF header definition	

### 4.1.16.3. Trigger and Frequency

Participant's Biography Import will be sent some months before games.

### 4.1.16.4. Message Structure

It has the same attibutes (except for @Code) and elements as in the Participant's Biography message, and adding the attributes/elements that are marked with an asterisk (*). See the next chapter.

The elements that are optional in this message depend on the DocumentSubCode attribute.

# 4.1.16.5. Message Values

Element	Attribute	M/O	Value	Comments
Participant	ExternalCode	M	S(20) with no leading zeroes	Participant's Biography Import external ID. This ID will start with "A" for Athletes, "C" for Coaches and "O" for Officials.
	ParticipantID	0	S(20) with no	It is the same as in the @DocumentCode header's attribute. The ID is assigned by the biography's provider.  Participant's ID (in Info
			leading zeroes	Diffusion System).  This ID is a pre-matched value with the Accreditation ID.
	GivenName	0	S(25)	Given name in mixed case
	FamilyName	M	S(25)	Family name mixed case
	BirthDate	M	YYYYMMDD	Date of birth. This information could be not known at the very beginning, but it will be completed for all participants after successive updates
	Height	0	N(3) 999	Height in centimetres. It will be included when this information is available. This information is not needed in the case of officials/referees.
	Weight	0	N(3) 999	Weight in kilograms. It will be included when this information is available. This information is not needed in the case of officials/referees.
	PlaceofBirth	0	S(75)	Place of Birth. This information is not needed in the case of officials/referees.
	CountryofBirth	0	CC @Country	Country of Birth. This information is not needed in the case of officials/referees.
	PlaceofResidence	0	S(75)	Place of Residence. This information is not needed in the case of officials/referees.
	CountryofResidence	0	CC @Country	Country of Residence. This information is not needed in the case of officials/referees.

Element	Attribute	M/O	Value	Comments
	Nationality	0	CC @Country	Participant's nationality.
				For some participants not to be sent in exceptional circumstances when it is now known.
	OlympicSolidarity	0	Y, N	Olympic Solidarity mark. This information is not needed in the case of officials/referees.
Participant /Discipline	Code	M	CC @Discipline	Discipline's code

# 4.1.16.6. Message sort

There is not a specific sorting for this message.

# 4.1.17. Team's Biography

# 4.1.17.1. Description

The Team's Biography message contains a team participating in the event (competitor of type team).

The message resets the previous Team's Biograpy information. This message includes only a team.

### 4.1.17.2. Header Values

Attribute	Value	Comment
DocumentCode	DDG000000	DD – Discipline
		G – Gender
		For example ATM000000:
		Athletics men
DocumentSubCode	S(20) with no leading	Team's ID
	zeroes	
DocumentType	DT_BIO_TEA	Team's Biography
DocumentSubtype	Code	Description
	MEDIUM	Medium Biography
	COMPLETE	Complete biography
Version	1V	Refer to the ODF header
		definition
Language	CC @Language	Language related to the
		content of the message.
FeedFlag "P"-Production		Refer to the ODF header
	"T"-Test	definition
	l	

Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

## 4.1.17.3. Trigger and Frequency

Team's Biography messages will be available the first day of the press operation. These messages are sent the first time including the complete bulk information known up to that moment.

### 4.1.17.4. Message Structure

The attribute DocumentSubtype in the Header determines when a biography is MEDIUM or COMPLETE.

The following elementt is included in the COMPLETE biography (not in MEDIUM biography):

• Team/Language/GInterest/AddInformation element

The elements that are optional in this message are:

Optional message elements		
CHighlights		
GInterest		

Competition					
•	Code				
	Team				
		Code			
		Gender			
		Organisation			
		Number			
		Name			
		Current			
		ModificationIndicator			
		(see Table Note)			
		ExternalCode(*)			
		Language			
			Language		
			CHighlights (0,1)		
				Highlights	
•					-

Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition

# 4.1.27.3. Trigger and Frequency

Trigger during operation period.

## 4.1.27.4. Message Structure

The structure of the News Document Import message is the same as the News Document message.

### 4.1.27.5. Message Values

All message attributes are the same as the news document message

### 4.1.27.6. Message sort

There is not a specific sorting for this message.

# 4.1.28.Transport Document (Shuttle Service)

# 4.1.28.1. Description

The Transport Document (Shuttle Service) message contains individual shuttle services' information.

The message resets the previous shuttle service data. Each message includes one shuttle service.

# 4.1.28.2. Header Values

Attribute	Value	Comment	
DocumentCode	GL0TTT000	TTT - Type of Shuttle	
		Service (ATH, OFF, MED)	
DocumentSubCode	Numeric	Shuttle Service's identifier	
DocumentType	DT_TRS	Transport Document	
Version	1V	Version number	
		associated to the	
		message's content.	
		Ascendant number	
Language	CC @Language	Language code	

FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

### 4.1.28.3. Trigger and Frequency

Trigger every time that a shuttle service is published.

### 4.1.28.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition				
	Code			
	Document			
		Parent		
		ShuttleServiceType		
		ShuttleServiceTypeName		
		Lineldentifier		
		AssociatedVenue (0N)		
			Code	
		ModificationIndicator (see Table Note)		
		Title		
			-	
		Body		
			-	

Table Note: "Transport Document (Shuttle Service)" and "Transport Document Update (Shuttle Service)" share the same message 's structure and attributes, except for the ModificationIndicator attribute, which is specific of the "Transport Document Update (Shuttle Servce)" message.

# 4.1.28.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Competition's ID
Document	Parent	M	Numeric ⁶	Parent's ID.  If the report has no parent, 0

 $^{^6}$  Parent: Shuttle Service documents are originally created in English. If Press Operation staff considers interesting to translate any report, the translations are created from the English one. @Parent links to the DocumentSubCode of the English version for translated messages. Example: English version → DocumentSubCode ="1230", then French translation → @Parent="1230"

_

Element	Attribute	M/O	Value	Comments
	ShuttleServiceType	М	CC	Code of Shuttle Services
			@ShuttleServiceType	Type
	ShuttleServiceTypeName	М	S(40)	Shuttle Service Type
				Name
	Lineldentifier	М	S(10)	Shuttle Service's ID
AssociatedVenue	Code	М	CC @Venue	Venue code for a venue
				associated to the Shuttle
				Service
Document/Title	-	M	S(100)	Text describing
				Document Title
Document/Body	-	М	Free text ⁷	RTF text containing the
				Body of the HTML article.

#### 4.1.28.6. Message sort

There is not a specific sorting for this message.

# 4.1.29. Transport Document Update (Shuttle Service)

#### 4.1.29.1. Description

The Transport Document Update (Shuttle Service) message is analogous to the Transport Document Update (Shuttle Service) message, but to update previous information.

The updating actions will be delete (unpublish) or modify (update). If one Document is delete (unpublish), all others Shuttle Services having it as Parent will be also delete (unpublish).

#### 4.1.29.2. **Header Values**

Attribute	Value	Comment	
DocumentCode	GL0TTT000	TTT – Type of Shuttle Service (ATH, OFF, MED)	
DocumentSubCode	Numeric	Shuttle Service's ID	
DocumentType	DT_TRS_UPDATE	Transport Document Update	
Version	1V	Version number associated to the message's content. Ascendant number	
Language	CC @Language	Language code	
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition	
Date	Date	Refer to the ODF header definition	

⁷ Codified in UTF-8.

Time	MillisTime	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

# 4.1.29.3. Trigger and Frequency

Trigger every time that a shuttle service is update (modify) or delete (unpublish).

## 4.1.29.4. Message Structure

The structure of the Transport Document Update (Shuttle Service) message is the same as the Transport Document Update (Shuttle Service) message, but adding the attribute ModificationIndicator, which is detailed in the next section.

The elements Title and Body are not required, neither, when delete (unpublish).

# 4.1.29.5. Message Values

All message attributes are the same as for the Transport Document message (Shuttle Service), but including the attribute defined below

Element	Attribute	M/O	Value	Comments
Document	ModificationIndicator	M	U, D	U - Update (modify) shuttle service
				D – Delete (unpublish) shuttle service

#### **4.1.29.6.** Message sort

There is not a specific sorting for this message.

# 4.1.30. Transport Document Import (Shuttle Service)

## 4.1.30.1. Description

The Transport Document Import (Shuttle Service) is a message containing an individual Transport Document (Shuttle Service).

The message resets the previous Transport Document Import (Shuttle Service). There is only one Transport Document Import (Shuttle Service) per message.

#### 4.1.30.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	Numeric	Shuttle Service's ID.
DocumentType	DT_TRS_IMP	Type of Transport documents
Version	1V	Version number associated to the message's content. Ascendant number

Language	CC @Language	Language code
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

# 4.1.30.3. Trigger and Frequency

Trigger during operation period, and some days before the operation starts.

# 4.1.30.4. Message Structure

The structure of the Transport Document Import (Shuttle Service) message is the same as the Transport Document Import (Shuttle Service).

# 4.1.30.5. Message Values

All message attributes are the same as the Transport Document Import (Shuttle Services) ones.

## 4.1.30.6. Message sort

There is not a specific sorting for this message.

# 4.1.31.Transport Document (Announcement)

# 4.1.31.1. Description

The Transport Document (Announcement) message contains individual announcement's information.

The message resets the previous announcement data. Each message includes one announcement.

#### 4.1.31.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	GL0000000	Global message for all
		Announcement items
DocumentSubCode	Numeric	Announcement's ID
DocumentType	DT_TRS_ANN	Announcement
Version	1V	Version number associated to the message's content. Ascendant number
Language	CC @Language	Language code
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition

Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

## 4.1.31.3. Trigger and Frequency

Trigger every time that an announcement is published.

# 4.1.31.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition				
	Code			
	Document			
		Parent		
		AssociatedShuttleServices(0N)		
			Code	
		ModificationIndicator (see Table Note)		
		Title		
			-	
		Body		
			-	

Table Note: "Transport Document (Announcement)" and "Transport Document Update (Announcement)" share the same message's structure and attributes, except for the ModificationIndicator attribute, which is specific of the "Transport Document Update (Announcement)" message.

# 4.1.31.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	M	CC @Competition	Competition's ID
Document	Parent	M	Numeric ⁸	Parent's ID
				If the report has no parent
				ID then it takes value 0
AssociatedShuttleServices	Code	M	Numeric	Shuttle Service code for
				which the Announcement
				is associated
Document/Title	-	M	S(100)	Text describing
				Document Title
Document/Body	-	M	Free text ⁹	RTF text containing the
				Body of the HTML article.

⁸ Parent: Announcement documents are originally created in English. If Press Operation staff considers interesting translating any report, the translations can be created from the English one. For translated items Parent element is the DocumentCode of the English version. Example: English version → DocumentCode ="1230"

-

# 4.1.31.6. Message sort

There is not a specific sorting for this message.

# 4.1.32.Transport Document Update (Announcement)

## 4.1.32.1. Description

The Transport Document Update (Announcement) message is analogous to the Transport Document Update (Announcement) message, but to update previous information.

The updating actions will be delete (unpublish) or modify (update). If one Document is delete (unpublish), all others Announcements having it as Parent will be also delete (unpublish).

## 4.1.32.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	GL0000000	Global message for all Announcement items
DocumentSubCode	Numeric	Announcement's ID
DocumentType	DT_TRS_ANN_UPDATE	Transport Document Update (Announcement)
Version	1V	Version number associated to the message's content. Ascendant number
Language	CC @Language	Language code
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
Serial	Numeric Refer to the ODF he definition	
Venue	CC @VenueCode	Venue code where the message is being generated

# 4.1.32.3. Trigger and Frequency

Trigger every time that an announcement is modify (update) or delete (unpublish).

⁹ Codified in UTF-8.

## 4.1.32.4. Message Structure

The structure of the Transport Document Update (Announcement) message is the same as the Transport Document Update (Announcement) message, but adding the attribute ModificationIndicator, which is detailed in the next section.

The elements Title and Body are not required, neither, when delete (unpublish).

# 4.1.32.5. Message Values

All message attributes are the same as for the Transport Document message (Announcement), but including the attribute defined below

Element	Attribute	M/O	Value	Comments
Document	ModificationIndicator	М	U, D	U - Update (Modify) announcement
				D - Delete (Unpublish) announcement

# 4.1.32.6. Message sort

There is not a specific sorting for this message.

## 4.1.33.Extended Start List

# 4.1.33.1. Description

The Extended Start List is a message containing the list of competitors for one particular event unit with additional information for each competitor. Competitors could be individual athletes, teams or team members.

It is a generic message for all sports, including as much generic information as possible, considering different types of disciplines and events can have substantial differences (e.g.: mass start lists, line-ups, etc.).

The mandatory attributes and elements defined in this message will have to be used by all the sports. Each ODF Sport Data Dictionary will refine the details of this message with the peculiarities of the discipline.

## 4.1.33.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	DDGEEEPUU	RSC according to the correct
		combination of:
		CC @Discipline
		CC @DisciplineGender
		CC @Event
		CC @Phase
		CC @Unit
DocumentType	DT_ESL	Extended Start List
Version	1V	Refer to the ODF header definition
FeedFlag	"P"-Production	Refer to the ODF header definition
	"T"-Test	
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition

Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

# 4.1.33.3. Trigger and Frequency

Trigger when all the competitors for one particular event unit are known.

For team events, trigger this message when the teams are available for the vent unit, and for some disciplines afterwards when team members are also known.

Trigger also after any major change.

If there is any sport-specific requirement, it is detailed in each of the ODF Sport Data Dictionaries.

# 4.1.33.4. Message Structure

The message structure of the Extended Start List is the same as the Start List message, but adding the element ExtCompetitor as optional in the elements Start/Competitor and Start/Competitor/Composition/Athlete (detailed in the next section).

/Athlete / Club				
Start /Competitor	-	0	Free Text	Athlete or team member's coach ID.
/Composition				
/Athlete / Coach_ID				

## 4.1.33.6. Message sort

Sort according to Start @SortOrder attribute used to sort the results (more detail in each of the ODF Sport Data Dictionaries), and other @Order attributes if used for each of the disciplines.

# **4.1.34. Pictures**

# 4.1.34.1. Description

The Pictures message contains pictures of athletes, coaches or officials.

## 4.1.34.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment		
DocumentCode	GL0000000	Global message for all messages		
DocumentSubCode	S(20) with no	Participant's ID (for an athlete,		
	leading zeroes	coach or official)I		
DocumentType	DT_PIC	Picture message		
Version	1V	Refer to the ODF header definition		
FeedFlag	"P"-Production	Refer to the ODF header definition		
	"T"-Test	Trefer to the ODT frequent definition		
Date	Date	Refer to the ODF header definition		
Time	MillisTime	Refer to the ODF header definition		
Serial	Numeric	Refer to the ODF header definition		
Venue	CC @VenueCode	Venue code where the message is		
		being generated		

# 4.1.34.3. Trigger and Frequency

Trigger the first day of the press operation, and after any major change.

# 4.1.34.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition			
	Code		
	Picture		
		ModificationIndicator	
		(see Table Note)	
		-	

Olympic Data Feed - © IOC

**Pictures** 

Table Note: "Picture" and "Picture Update"share the same message's structure and message attributes, except for the ModificationIndicator attribute, which is specific of the "Picture Update" message.

## 4.1.34.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Competition's ID
	-	М	Free Text	The Picture element may have a
Picture				body consisting of one Base64-
				encoded report

(Table comment: Attribute to be set Mandatory from Optional or redefined. Refer to the ODF Sport Data Dictionary for each of the disciplines)

## 4.1.34.6. Message sort

There is not any message sorting requirement for this message.

# 4.1.35.Pictures Update

## 4.1.35.1. Description

The Pictures Update message is analogous to the Pictures message, but to update previous information.

The updating actions will be delete or update.

# 4.1.35.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment	
DocumentCode	GL0000000	Global message for all messages	
DocumentSubCode	S(20) with no	Participant's ID (athlete, coach or	
	leading zeroes	official)	
DocumentType	DT_PIC_UPDATE	Update picture message

FeedFlag	"P"-Production	Refer to the ODF header definition	
	"T"-Test		
Date	Date	Refer to the ODF header definition	
Time	MillisTime	Refer to the ODF header definition	
Serial	Numeric	Refer to the ODF header definition	
<mark>Venue</mark>	CC @VenueCode	Venue code where the message is	
		being generated	

## 4.1.35.3. Trigger and Frequency

Trigger when there is an update/delete of the picture.

# 4.1.35.4. Message Structure

The structure of the Pictures Update message is the same as the Pictures message, but adding the attribute ModificationIndicator, which is detailed in the next section.

Olympic Data Feed - © IOC Pictures Update

#### 4.1.35.5. **Message Values**

All message attributes are the same as the Picture message, but including the attribute defined below

Element	Attribute	M/O	Value	Comments
Picture	ModificationIndicator	M	U, D	U - Update Picture
				D – Delete Picture

#### 4.1.35.6. Message sort

There is not a specific sorting for this message.

# 4.1.36. Notification message

#### 4.1.36.1. **Description**

The Notification message contains a notification about the availability of an online document.

#### 4.1.36.2. **Header Values**

The following table describes the ODF header attributes

Attribute	Value	Comment		
DocumentCode	S(9)	Document Code of the online		
		document that is being notified.		
DocumentSubcode	S(10)	Document Subcode of the online		
		document that is being notified.		
DocumentType	DT_NOTIFICATION	Picture message		
DocumentSubtype	S(50)	Concatenation of the Document		
		Type and Document Subtype		
		attributes of the online document		
		that is being notified.		
		This is needed to preserve the Key		
\/	4 1/	of the message.		
Version	1V	Version of the online document that is being notified.		
FeedFlag	"P"-Production	FeedFlag of the online document		
	"T"-Test	that is being notified.		
Date	Date	Refer to the ODF header definition		
Time	MillisTime	Refer to the ODF header definition		
Venue	CC @VenueCode	Venue of the online document that		
		is being notified.		
Serial	Numeric	Serial of the online document that is		
		being notified.		
<mark>Venue</mark>	CC @VenueCode	Venue code where the message is		
		being generated		

#### 4.1.36.3. **Trigger and Frequency**

Trigger of this message is after the reception of the original message that is made available online.

#### 4.1.36.4. **Message Structure**

The following elements describe the message structure from the OdfBody element.

Olympic Data Feed - © IOC Notification message Page 118/264

				message

# 4.1.36.6. Message sort

There is not any message sorting requirement for this message.

# 4.1.37. Schedule and Results by NOC

## 4.1.37.1. Description

The "Schedule and Results by NOC" message contains this information for a NOC on a single competition day (between the global GM & GN of the day). It only contains competition activities (Phase Type=Competition).

It increments its content as more events units are completed by the NOC during the day, and it always includes all data for the day. The arrival of the message resets the entire previous "Schedule and Results by NOC" information.

The message is by NOC, each message is related to only one NOC and day. Several disciplines may appear in a single message.

Information includes only competitors of the current NOC or all competitors in the case an event unit is Head to Head. It also includes competitors defined as group (Competitor Type = Group). At this case, a group is treated as individual competitors and only includes the athletes of the specific NOC.

The message does not include information about horses (Competitor Type = Horses), Records, Coaches, Period Results and Actions.

# 4.1.37.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
Allibule	I value	Comment

DocumentCode	GL0000Ydd	Global message for all disciplines (sent at daily level, where dd is the Day)
<b>DocumentSubcode</b>	NOC Code	
DocumentType Processing Processin	DT_SCHED_RES_NOC	Schedule and Results by NOC
Version	1V	Version number associated to the message's content.  Ascendant number
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Refer to the ODF header definition

# 4.1.37.3. Trigger and Frequency

This message is sent multiple times daily after "Global good morning" message has been sent (only for current logical date). The exact frequency is determined at a given competition.

# 4.1.37.4. Message Structure

The following elements describe the message structure from the OdfBody element.

		•	•	1	,			,	,	,

# 4.1.37.5. Message Values

The values of the attributes of Result are the same as defined in the Start List and Event Unit Results messages.

Element	<b>Attribute</b>	M/O	<b>Value</b>	Comments
Competition	Code	M	CC @Competition	Competition's ID
Discipline	Code	M	CC @Discipline	Discipline Code
Gender	Code	M	CC	Discipline Gender Code
			@DisciplineGender	
Event	Code	M	CC @Event	Event ID
Phase Phase	Code	M	CC @Phase	Phase ID
	Type Page 1	M	CC @PhaseType	Include the phase type only
				for competition and official
				training phases
<mark>Unit</mark>	Code Code	M	CC @Unit	Unit ID
	<u>Status</u>	M	CC @UnitStatus	Unit Status
	StartDate	O	<b>DateTime</b>	Start date. Optional,
				because it is meaningless
				for some Unit@Status, such
				as for cancelled, postponed.
				Example:
				2006-02-26T10:00:00+01:00
	<b>EstimatedStartDate</b>	O	Boolean	'true' if StartDate (scheduled
				start time) is an estimation.
				'false' if StartDate
				'false' if StartDate (scheduled start time) is not
				an estimation.
				an estimation.
				Start times of some units
				depend on the completion of
				previous ones, where
				duration is not exact. In this
				case, the start time is set to
				estimated. When the
				previous event unit finishes,
				then this flag is always set to
				false.
		1		Optional because it is not
				sent if @StartDate is not
				sent
	<b>EndDate</b>	O	DateTime Page 1	End date. Optional, because
				it is meaningless for some
		1		Unit@Status, such as for
				cancelled, postponed.
		1		
				Example:
				2006-02-26T10:00:00+01:00

Element	Attribute	M/O	<b>Value</b>	Comments
	EstimatedEndDate	0	Boolean	'true' if EndDate scheduled
				end time is estimation.
				'false' if EndDate scheduled
				end time is not an
				estimation.
				Some event units have a
				scheduled end time well
				defined. However, some
				event units have a scheduled end time quite
				variable (i.e.: some press
				conferences, etc.). When
				the scheduled end time is finally known, this flag is
				always set to false.
				Ontional handung it is not
				Optional because it is not sent if @StartDate is not
				sent.

# 4.1.37.1. Message sort

Unit @StartDate is the attribute used to sort the Units.

Result @SortOrder will be the attribute used to sort the results. This attribute is refined in each of the ODF Sport Data Dictionaries.

# 4.2. Sport Messages

# 4.2.1. Overall perspective

#### 4.2.1.1. **List of Messages**

The following table lists the ODF sport messages.

Message Type	Message name
DT_START_LIST	Start List
DT_RESULT	Event Unit Results
DT_PHASE_RESULT	Phase Results
DT_CUMULATIVE_RESULT	Cumulative Results
DT_POOL_STANDING	Pool standings of group in a team competition
DT_RANKING	Event Final ranking
DT_STATS	Statistics table
DT_MEDALLISTS	Medallists of one event
DT_MEDALLISTS_DISCIPLINE	Medallists by discipline
DT_RECORD	Records
DT_COMMUNICATION	Official Communication
DT_BRACKETS	Brackets
DT_GM	Discipline/venue good morning
DT_GN	Discipline/venue good night
DT_FED_RANKING	Federation ranking
DT_CONFIG	Discipline configuration
DT_WEATHER	Event Unit Weather conditions
DT_SERIAL	List of Current PiT Serial
DT_PHOTOFINISH	Photofinish
DT_PRESSPHOTOFINISH_LK	Press Photo finish
DT_PLAY_BY_PLAY	Play by Play

Each discipline using a message will have to adapt in its ODF document the general presentation of the message: some of the definitions will have to be extended and some overwriten, depending on the sport's specific requierements.

The following situations can occur:

#### Situation 1:

When one discipline must extend in its ODF document a particular element of the message definition (e.g.: the header of the message). If this extension is not done, the definition of the message for that sport will not be complete. This extension is considered mandatory for the sport that makes use of this particular message.

#### Situation 2:

When the message's general definition contains elements that can be overwriten (e.g.: its trigger and frequency). If there are no specific requierements for the sport using the message the general rule of the message as described in this document should be followed. Situation 3:

#### Situation 3:

When one message could be extended by the use of optional message elements, which should not be included in general, unless it is specifically requested for a particular sport in its ODF Sport Data Dictionary document.

#### Situation 4:

When the definition of one message could also be extended by the inclusion of optional attributes (otherwise not necessary according to their general definitions), or by redefining the rule that describes when these attributes should be included. However, some mandatory attributes can be redefined in each one of the ODF Sport Data Dictionary document.

For the message definition: The ODF Sport Data Dictionary will redefine the general definition of the needed message according to the related sport's specific requierements:

- Triggers and Frequency: for some messages, the redefinition will be Mandatory.
- Message Structure: for a specific sport can be redefined to include optional elements
- Message Values: for a specific sport it is possible to redefine the optional attributes or overwrite the required attributes. All the attributes defined in this document with the comment "See table comment" must be redefined in the ODF Sport Data Dictionary document of the sport using them.

The following table presents the relation between the messages and the redefinition need of its parts (Trigger and Frequency, Structure and Values) in the ODF Sport Data Dictionary document.

	Trigger and Frequency	Structure (message	Message Values (message attributes)
DT_START_LIST	0	0	0

DT_RESULT	0	0	0
DT_CUMULATIVE_RESULT	0	0	0

## 4.2.1.2. PiT Messages definition

There are two types of ODF-PiT messages:

Control messages: DT_GM, DT_GN, DT_SERIAL

Content messages: Rest of Messages

## 4.2.1.3. PiT message triggers

Every message will define the general rule for its triggers.

One sport using a message can update the trigger information according with the sport's requirements.

# 4.2.2. Start List

# 4.2.2.1. Description

The start list is a message containing the list of competitors for one particular event unit, either competing as single athletes or as aggregated athletes according to the team definition as it can be seen in the List of teams' message in the ODF Central Messages Interface Document.

The start list is a generic message for all sports, including as much generic information as possible, considering start lists may have substantial differences between different disciplines and events (example: mass start list, line-ups, etc.).

The mandatory attributes and mandatory elements defined in this message will have to be used by all the sports, although each ODF Sport Data Dictionary will have to

explain with further detail the optional attributes or optional elements of the message, and may overwrite the use of mandatory attributes.

#### 4.2.2.2. **Header Values**

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	DDGEEEPUU	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event P according to CC @Phase UU according to CC @Unit  Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute
DocumentType	DT_START_LIST	Start list message
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

#### 4.2.2.3. **Trigger and Frequency**

The general rule is that this message is sent as soon as some of the information arriving in this message and associated to the event unit (PhaseInfos, UnitInfos, and Officials) is known and also when all the competitors for one particular event unit are known.

For team event units this message should send as soon as the teams are available (maybe first teams, and after another message with team members).

Trigger also after any major change.

If there is any sport-specific requirement, it should be detailed in each of the ODF Sport Data Dictionaries.

#### 4.2.2.4. **Message Structure**

In this chapter it will be described the message structure from the OdfBody element for this message.

As well as the general rules described in the chapter 4.3 (Sport messages definition), it is important to point out in particular for the start list message the following: Athlete's (or team's) entries can be found in the list of athletes by discipline and list of teams messages (EventEntry elements) in the ODF Central Messages Interface Description Document. However, some event entries may be overwritten for a particular event unit by making use of EventUnitEntry elements in the start list message. Example, in Curling you may want to state that the Skip is for a particular game is one competitor, being different from the Skip in general for the event. Then, you may include the Skip information for the new competitor, and the remove the Skip information for the competitor assigned as skip in the rest of the games. However, for the rest of the games, if it is not stated the contrary, the skip remains the same competitor as the most recent ODF Central Message EventEntry element.

To summarize, any athlete or team entry not particularized in this start list message should be assumed from the List of athletes by discipline or List of teams, as they are defined in the ODF Central Messages Interface Document.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

Optional message elements referenced in each ODF Sport Data Dictionary							
PhaseInfos and its child element PhaseInfo							
PhaseInfo /Extensions							
UnitInfos and its child elements UnitDateTime and UnitInfo							
UnitInfo /Extensions							
UnitInfo /Competitor (UnitInfo /Competitor /Composition when Composition is not known for team event units)							
Officials and its child element Official							
ExtOfficial							
Coaches and its child element Coach							
Start /Competitor /EventUnitEntry							
Start /Competitor /Composition /Athlete /EventUnitEntry (Start /Competitor /Composition when Composition is not known for team event units)							

You must be aware the Start element is optional because according to the trigger, the start list could be sent with information about PhaseInfos, UnitInfos and Officials elements, without knowing the participants, yet. However, as soon as this information is known, the Start element should be included when event unit participants are known in any case.

rules in chapter 4.3.)				

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

#### 4.2.2.6. Message sort

There is not any special sort order requirement for this message. Usually, Start @SortOrder will be the attribute used to sort the results, as the attribute @SortOrder is defined in each of the ODF Sport Data Dictionaries (if the start list is sent at the moment the competitors are known). Other @Order attributes will usually be used to order the rest of elements, as these elements are being requested in each of the ODF Sport Data Dictionary Documents.

## 4.2.3. Event Unit Results

#### 4.2.3.1. Description

The Event Unit Results is a message containing the results for the list of competitors in one event unit, either competing as single athletes or as aggregated athletes according to the team definition as it can be seen in the List of teams' message in the ODF Central Messages Interface Document.

The Event Unit Results message is a generic message for all sports, including as much generic information as possible, considering results may have substantial differences between different disciplines and events (example: score of a match, time in a race, distance in a throw, etc.).

The mandatory attributes and mandatory elements defined in this message will have to be used by all the sports, although each ODF Sport Data Dictionary will have to explain with further detail the optional attributes or optional elements of the message.

#### 4.2.3.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	DDGEEEPUU	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event P according to CC @Phase UU according to CC @Unit  Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute
DocumentType	DT_RESULT	Event Unit Results message
ResultStatus	CC @ResultStatus	It indicates whether the result is official or unofficial (or intermediate, interim, partial)
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
DocumentSubtyp e	To be defined in each ODF Data Dictionary	It optional attribute only for special cases in result messages (for example TIE BREAK in GA,) because there are a lot of data
Serial	Numeric	Please, refer to the ODF header definition

## 4.2.3.3. Trigger and Frequency

The general rule is that this message is sent as when the event unit finishes and the message becomes unofficial, and also afterwards when the message becomes official (when the event unit becomes official). The official/unofficial status can be seen in ODF headers (ResultStatus attribute).

Trigger also after any major change.

However, if there is any kind of sport specific rule, it may be overridden in each of the ODF Sport Data Dictionaries: example to send interim results, partial results, etc.

There is special case that when finish the result there is a tie-break with a lot of data (for example in GA) and in this case we send a DT_RESULT with DocumentSubtype with only the data of the tie-break.

## 4.2.3.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

Composition		T				1		
Competition	Code							-
	Dhanalafan (0.4)							+

The elements Key are marked in bold for the Real Time. All the parents' elements key must to be sent if a child value has changed, also all the mandatory elements must be sent. In any case, all the Unit Actions wll always contain all related Extended Actions.

# 4.2.3.5. Message Values

Be aware of all mandatory attributes that will have to appear in any ODF Event Unit Results message, and of those attributes with an optional appearance. In this last situation, each of the ODF Sport Data Dictionaries will have to explicitly mention and define the use of the optional attributes.

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition
PhaseInfo	Туре	М	See table comment	Type (categorization) of PhaseInfo.
(Phase info item associated to the event unit)	Code	M	See table comment	Key of the PhaseInfo, to uniquely identify this element.
	Pos	0	See table comment	An optional numerical value used to sort phase info items with same type and code.
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced PhaseInfo.
	Туре	М	See table comment	Type (categorization) of the Extension
PhaseInfos /PhaseInfo /Extensions /Extension	Code	M	See table comment	Key of the Extension, to uniquely identify this element.
(Extensions of	Pos	0	Numeric	An optional numerical value used to sort extended data's
PhaseInfos)			See table comment	extensions
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced Extension.
UnitDateTime  (Actual start –and/or end-dates and times)	StartDate	M	DateTime	Actual start date-time. For multi-day units, the start date-time is that on the first day.
	EndDate	0	DateTime  See table comment	Actual end date-time (The attribute should be informed, when available, for ResultStatus UNOFFICIAL and OFFICIAL)
	Туре	М	See table comment	Type (categorization) of UnitInfo.
UnitInfo	Code	М	See table comment	Key of the UnitInfo element, to uniquely identify this element.
(Unit info item associated to the event unit)	Pos	0	See table comment	An optional numerical value used to sort unit info items with same type and code (the attribute Pos could be the period, as example).
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced UnitInfo.
UnitInfos /UnitInfo /Extensions /Extension	Туре	М	See table comment	Type (categorization) of the Extension
/LAGUSIOUS /EXCEUSIOU	Code	М	See table comment	Key of the Extension, to
(Extensions of UnitInfos)				uniquely identify this element.

Element	Attribute	M/O	Value	Comments
	Pos	0	Numeric	An optional numerical value
				used to sort extended data's
			See table comment	extensions
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced Extension.
UnitInfo /Competitor	Organisation	0	CC@Organisation	Organisation ID
	Order	0	N(3)	Order of the competitor associated to the UnitInfo, if more than one competitor associated. Do not send otherwise
	FamilyName	M	S(25)	Family name of the person associated to the UnitInfo.
UnitInfo /Competitor /Composition /Athlete  (If the UnitInfo has a related person, person associated to this UnitInfo.				This person may not be appearing in the List of athletes by discipline message (ODF Central Messages Interface Description Document), and for this reason a @Code attribute is not possible.
In a different way to the	GivenName	0	S(25)	Given name of the person
competitors' rules in			See table comment	associated to the UnitInfo
chapter 4.3, it will be sent FamilyName and GivenName because, in many cases, the person related to an UnitInfo may not be an athlete).				This person may not be appearing in the List of athletes by discipline message (ODF Central Messages Interface Description Document), and for this reason a @Code attribute is not possible.
	Code	M	See table comment	Key of the Period element to uniquely identify this element.
	HomeScore	M	See table comment	Overall score of the home competitor at the end of the period
Period (Period in which the event	AwayScore	М	See table comment	Overall score of the away competitor at the end of the period
unit message is arriving)	HomePeriodScore	0	See table comment	Score of the home competitor just for this period
	AwayPeriodScore	0	See table comment	Score of the away competitor just for this period
	Duration	0	See table comment	Duration of the period
	Туре	М	See table comment	Type (categorization) of the ExtendedPeriod
ExtendedPeriod (ExtendedPeriod	Code	M	See table comment	Key of the ExtendedPeriod, to uniquely identify this element.
information)	Pos	0	Numeric	An optional numerical value used to sort ExtendedPeriod
			See table comment	with same type and code.

Element	Attribute	M/O	Value	Comments
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced Extension.
	Туре	М	See table comment	Type (categorization) of the UnitAction
	Code	М	See table comment	Key of the UnitAction, to uniquely identify this element.
	Pos	0	Numeric	An optional numerical value used to sort UnitAction with
UnitAction			See table comment	same type and code like split time in race competition.
(UnitAction, like it could be a goal)	Value	0	See table comment	Value of the @Code (+ @Pos) referenced UnitAction
The Actions can suffer a lot of modificatios during the competition an a Status attribute has been defined to control this	Status	M	N, U, D	Status of the action to indicate if the action is new (N), update (U) or delete (D). When used in DT_RT_RESULT with ResultStatus LIVE_FULL, LIVE_MANDATORY and LIVE_LAST or DT_RESULT Status will always be "N"
	Time	M	MM:SS 00:00 or See table comment for some Sports	Time in minutes and seconds in which the action occurred Example (02:05)
	Туре	М	See table comment	Type (categorization) of the ExtendedAction
ExtendedAction	Code	M	See table comment	Key of the ExtendedAction, to uniquely identify this element.
(ExtendedAction information)	Pos	0	Numeric See table comment	An optional numerical value used to sort ExtendedAction with same type and code.
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced ExtendedAction
UnitAction /Competitor	Type	М	T,A	T for team A for athlete
(Competitor participating	Code	М	S(20) with no leading zeroes	Competitor's ID
in the UnitAction, if the UnitAction has an	Role	0	See table comment	Role of the competitor in the action
associated competitor.  Refer to chapter 4.3 for competitors' rules).	Order	M	Numeric	Order in which the competitor should appear for the action, if there is more than one competitor
UnitAction /Competitor /Composition /Athlete	Code	М	S(20) with no leading zeroes	Athlete's ID or team member related to the action
(Refer to chapter 4.3 for	Role	0	See table comment	Role of the competitor in the action

Element	Attribute	M/O	Value	Comments
competitors' rules).	Order	M	Numeric	Order in which either the single athlete or the team member (depending on Competitor @Type) should appear for the action, if there is more than one element of this kind associated to the action
	Rank	0	Text See table comment	Rank of the competitor in the result.
	RankEqual	0	Y or N	It identifies if a rank has been equalled. In PiT message only Y value has sense.
D	ResultType	0	See table comment	Type of the @Result attribute
Result	Result	0	See table comment	The result of the competitor in the event unit
(For any Event Unit Results message, there	IRM	0	See table comment	The invalid rank mark, in case it is assigned
should be at least one competitor being awarded a result for the event unit)	QualificationMark	0	See table comment	The code which gives an indication on the qualification of the competitor for the next round of the competition
	WLT	0	See table comment	The code whether a competitor won, lost or tied the match / game
	SortOrder	М	Numeric See table comment	Used to sort all results in an event unit
RecordIndicators	Order	M	Numeric	Deprecated: For London and Glasgow, Order is always '1'for records broken/equalled in this Event Unit.
/RecordIndicator (Result's record indicator)	Code	М	CC @RecordCode	Code which describes the record broken by the result value.
	RecordType	М	CC @RecordType	Code which specifies the level at which the record is broken.
	Code	М	S(20) with no leading zeroes or TBD	Competitor's ID or TBD in case that the competitor is unknown or not exists
Result /Competitor	Туре	М	T,A, H	T for team A for athlete H for Horse
(Competitor related to one event unit result. Refer to chapter 4.3 for competitors' rules)	Bib	0	See table comment	Bib number  Bib number is in fact a special Event Unit Entry. However, since it is very meaningful in the sports that make use of this attribute, it has been considered as an attribute.

Element	Attribute	M/O	Value	Comments
	Туре	M	EU_ENTRY	Only for Team Sport Type (categorization) of the EventUnitEntry.
Result /Competitor/ EventUnitEntry	Code	M	E_HOME or E_AWAY	Only for Team Sport Key of the EventUnitEntry to uniquely identify if the Competitor is the Home or the Away Team
	Туре	М	See table comment	Type (categorization) of the ExtendedResult.
Result /Competitor /ExtendedResults /ExtendedResult	Code	M	See table comment	Key of the ExtendedResult, to uniquely identify this element.
(Team competitor's extended results, according to the competitor's rules in	Pos	0	Numeric See table comment	An optional numerical value used to sort extended data with same type and code like split time in race competition.
chapter 4.3)	Value	0	See table comment	Value of the @Code (+ @Pos) referenced ExtendedResult.
Result /Competitor	Туре	М	See table comment	Type (categorization) of the Extension
/ExtendedResults /ExtendedResult /Extensions /Extension	Code	M	See table comment	Key of the Extension, to uniquely identify this element.

(Team member's or individual athlete's statistics, depending on whether Competitor	Pos	0	Numeric See table comment	An optional numerical value used to sort extended data with same type and code like split time in race competition.
@Type="T" or Competitor @Type="A" according to competitors' rules in chapter 4.3.)	Value	0	See table comment	Value of the @Code (+ @Pos) referenced Stat.
Result /Competitor/ Composition/ Athlete	Туре	M	See table comment	Type (categorization) of the ExtendedStat
/Stats /Stat /ExtendedStat (Extended information for	Code	М	See table comment	Key of the ExtendedStat, to uniquely identify this element.
the statistics)	Pos	0	Numeric See table comment	An optional numerical value used to sort ExtendedStat with same type and code.

Element	Attribute	M/O	Value	Comments
	Value	0	See table comment	Value of the @Code (+
				@Pos) referenced
				ExtendedStat

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

## 4.2.3.6. Message sort

Result @SortOrder will be the attribute used to sort the results, as the attribute @SortOrder is defined in each of the ODF Sport Data Dictionaries. Other @Order attributes will usually be used to order the rest of elements, as these elements are being requested in each of the ODF Sport Data Dictionary Documents.

UnitAction @Time will be used to sort actions (if actions are requested).

### 4.2.4. Phase Results

#### 4.2.4.1. Description

The Phase Results is a message containing the results for the list of competitors in a particular phase (example: Alpine Skiing Super Combined, Downhill). The "Unit" attributes (in the ODF header or the message body) will be informed with zeroes. Then, the Phase Results will be understood for the phase as a whole (not including cumulative information from previous phases), if there are rules for the particular sport in regards to it (see each of the ODF Sport Data Dictionary documents).

The Phase results message is a generic message for all sports, including as much generic information as possible, considering results may have substantial differences between different disciplines and events (example: score of a match, time in a race, distance in a throw, etc.).

The mandatory attributes and mandatory elements defined in this message will have to be used by all the sports, although each ODF Sport Data Dictionary will have to explain with further detail the optional attributes or optional elements of the message.

#### 4.2.4.2. **Header Values**

The following table describes the ODF header attributes

Attribute	Value	Comment		
DocumentCode	DDGEEEP00	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event P according to CC @Phase  Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute		
DocumentType	DT_PHASE_RESULT	Phase Results message		
ResultStatus	CC @ResultStatus	It indicates whether the result is official or unofficial		
Version	1V	Please, refer to the ODF header definition		
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition		
Date	Date	Please, refer to the ODF header definition		
Time	MillisTime	Please, refer to the ODF header definition		
LogicalDate	Date	Please, refer to the ODF header definition		
Venue	CC @VenueCode	Venue code where the message is being generated		
Serial	Numeric	Please, refer to the ODF header definition		

#### 4.2.4.3. **Trigger and Frequency**

The general rule is that this message is sent as soon as the last event unit for the corresponding phase finishes and the message becomes unofficial just at the end of the event unit, and afterwards when the message becomes official (when the last event unit of the phase becomes official). The official/unofficial status can be seen in ODF header (ResultStatus attribute).

Trigger also after any major change.

However, if there is any kind of sport specific rule, it may be overridden in each of the ODF Sport Data Dictionaries: example to send interim results, partial results, etc.

#### 4.2.4.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

## Optional message elements referenced in each ODF Sport Data Dictionary

RecordIndicators and its child element RecordIndicator

# 4.2.4.5. Message Values

Be aware of all mandatory attributes that will have to appear in any ODF Phase Results message, and of those attributes with an optional appearance. In this last situation, each of the ODF Sport Data Dictionaries will have to explicitly mention and define the use of the optional attributes.

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition
PhaseInfo	Туре	М	See table comment	Type (categorization) of PhaseInfo.
	Code	М	See table comment	Key of the PhaseInfo, to uniquely identify this element.
	Pos	0	See table comment	An optional numerical value used to sort phase info items with same type and code.
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced PhaseInfo.
	Туре	М	See table comment	Type (categorization) of the Extension
PhaseInfos /PhaseInfo /Extensions /Extension	Code	М	See table comment	Key of the Extension, to uniquely identify this element.
(Extensions of	Pos	0	Numeric	An optional numerical value used to sort extended data's
PhaseInfos)			See table comment	extensions
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced Extension.
	Rank	0	Text	Rank of the competitor in the phase.
			See table comment	
	RankEqual	0	Y	It identifies if a rank has been equalled.
	ResultType	0	See table comment	Type of the @Result attribute
Result	Result	0	See table comment	The result of the competitor in the phase
(For any Phase Results message, there should be	IRM	0	See table comment	The invalid rank mark, in case it is assigned
at least one competitor being awarded a result for the phase)	QualificationMark	0	See table comment	The code which gives an indication on the qualification of the competitor for the next round of the competition
	SortOrder	M	Numeric See table comment	Used to sort all results in a phase, based on rank, but to break rank ties, etc. It is mainly used for display
RecordIndicators /RecordIndicator	Order	M	Numeric	purposes.  Deprecated: For London and Glasgow, Order is always '1' for the latest (best) record of each type broken/equalled up to the current phase.
(Phase result's record indicator)	Code	М	CC @RecordCode	Code which describes the record broken by the result value.
	RecordType	М	CC @RecordType	Code which specifies the level at which the record is broken.

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

#### 4.2.4.6. Message sort

Result @SortOrder will be the attribute used to sort the results, as the attribute @SortOrder is defined in each of the ODF Sport Data Dictionaries. Other @Order attributes will usually be used to order the rest of elements, as these elements are being requested in each of the ODF Sport Data Dictionary Documents.

## 4.2.5. Cumulative Results

#### 4.2.5.1. Description

The Cumulative Results is a message containing the cumulative results for the list of competitors in one phase, up to the end of this phase (including information regarding to previous phases), or up to the end of an event unit within a phase (including also the units prior the current one) either competing as single athletes or as aggregated athletes according to the team definition as it can be seen in the List of teams' message in the ODF Central Messages Interface Document.

The difference between the Phase Results message (DT_PHASE_RESULTS) and the Cumulative Results (DT_CUMULATIVE_RESULT) is that the first one includes only the results for the phase independently from previous phases, while the Cumulative Results takes into account the results of previous phases, and therefore it gives an idea about how a competition is progressing up to the end of an intermediate phase. This information may be useful in some events, such as it could be in Athletics decathlon or in Bobsleigh.

The Cumulative Results message may be used to send an interim summary of results (including rank) part way through a phase. In this case, the DocumentSubtype is used to specify the last phase or event unit that contributed results to the message.

The mandatory attributes and mandatory elements defined in this message will have to be used by all the sports, although each ODF Sport Data Dictionary will have to explain with further detail the optional attributes or optional elements of the message.

#### 4.2.5.2. **Header Values**

The following table describes the ODF header attributes

Attribute	Value	Comment			
DocumentCode	DDGEEE000	DD according to CC			
		@Discipline			
		G according to CC			
		@DisciplineGender			
		EEE according to CC			
		@Event			
		Each ODF Sport Data			
		Dictionary will have to			
		complete the explanation			
		regarding to this attribute			
DocumentType	DT_CUMULATIVE_RESULT	Cumulative Results			
		message			
ResultStatus	CC @ResultStatus	It indicates whether the			
		result is official or unofficial			

DocumentSubtype	To be defined in each ODF Data Dictionary	It is the DocumentCode code up to the moment the cumulative message contains information:  E.g.: DDGEEEPUU would be cumulative results up to the end of the referenced event unit E.g.: DDGEEEP00 would be cumulative results up to the end of the referenced phase			
Version	1V	Please, refer to the ODF header definition			
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition			
Date	Date	Please, refer to the ODF header definition			
Time	MillisTime	Please, refer to the ODF header definition			
LogicalDate	Date	Please, refer to the ODF header definition			
Venue	CC @VenueCode	Venue code where the message is being generated			
Serial	Numeric	Please, refer to the ODF header definition			

### 4.2.5.3. **Trigger and Frequency**

The general rule is that this message is sent as soon as:

If results are accumulating accross phases (i.e. the message is sent at event level and the Document Subtype of the message is DDGEEEP00):

It is sent after the last event unit for the first phase, in addition to subsequent phases. The message becomes unofficial just at the end of the event unit, and afterwards when the message becomes official (when the last event unit becomes official).

If results are accumulated across event units (i.e. the message is sent at phase level and the Document Subtype of the message is DDGEEEPUU):

It is sent after the first event unit, in addition to subsequent event units; (in this case, the first DT_CUMULATIVE_RESULT message and the DT_RESULT message may contain the same information). The message becomes unofficial just at the end of the event unit, and afterwards when the message becomes official (when the last event unit becomes official).

The sequence is clarified below. The version number, n, is the version of the last DT_RESULT message sent for the same RSC code (n=0 if no DT_RESULT messages have been sent). The version number, m, is the version of the last DT CUMLATIVE RESULT message sent for the same RSC code (m=0 if no DT_CUMULATIVE_RESULT messages have been sent).

The clarification of this sequence can be:

Olympic Data Feed - © IOC Sport Messages Page 157/264

### Case 1:

- a) Event has been complete and the results are unofficials:
  - Sent DT_RESULT with ODF Version n+1 and ResultStatus =" UNOFFICIAL".
  - 2. Sent DT_CUMULATIVE_RESULT with ODF Version m+1 and ResultStatus =" UNOFFICIAL".
- b) Results are checked and signed off by referee:
  - Sent DT_RESULT with ODF Version n+2 and ResultStatus =" OFFICIAL".
  - 2. Sent DT_CUMULATIVE_RESULT with ODF Version m+2 and ResultStatus =" OFFICIAL".

### Case 2:

- a) Event has been complete and the results are directly officials:
  - Sent DT_RESULT with ODF Version n+1 and ResultStatus =" OFFICIAL".
  - 2. Sent DT_CUMULATIVE_RESULT with ODF Version m+1 and ResultStatus =" OFFICIAL".

Trigger also after any major change.

/ExtendedResult /Extension

However, if there is any kind of sport specific rule, it may be overridden in each of the ODF Sport Data Dictionaries: example to send interim results, partial results, etc.

### 4.2.5.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

Optional message	elements refe	renced in each OD	F Sport D	ata	Diction	ary	
/ExtendedInfos and its child element ExtendedInfo

# 4.2.5.6. Message sort

The message sorting order is the same as that explained in the Event Unit  $\slash\,$  Phase Results messages.

# 4.2.6. Pool Standings

### 4.2.6.1. Description

The pool standings message contains the standings of a group in a competition. It is similar to the Phase Results message, but the main difference is in the frequency and trigger of the message, because in this case the message is triggered after each event unit (game, match, etc.), while in the previous message the trigger is after the phase finishes. For this reason, the message will be at event unit level, in most of the sports, in order to provide with the information of at which moment the message was generated. Besides, pool standings' is used in competitions that have groups.

You should notice that this report is sent independently for each of the groups / pools of the competition in a particular phase, and the group / pool can be determined from the message headers (DocumentCode, but also DocumentSubtype).

The mandatory attributes and mandatory elements defined in this message will have to be used by all the sports, although each ODF Sport Data Dictionary will have to explain with further detail the optional attributes or optional elements of the message.

### 4.2.6.2. Header Values

The following table describes the ODF header attributes (please, be aware of DocumentSubtype attribute, used to inform the group / pool, and being part of the key to identify the message along with the DocumentCode and Type attributes).

Attribute	Value	Comment
DocumentCode	DDGEEEP00	Message at the phase level.
		DD according to CC
		@Discipline
		G according to CC
		@DisciplineGender
		EEE according to CC @Event
		P according to CC @Phase
DocumentType	DT_POOL_STANDING	Pool Standings
DocumentSubtype	To be defined in each ODF	Please, refer to the ODF
	Data Dictionary	header definition
ResultStatus	CC @ResultStatus	Result status
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production	Please, refer to the ODF
	"T"-Test	header definition
Date	Date	Please, refer to the ODF
<b>-</b> .	NATION TO	header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

## 4.2.6.3. Trigger and Frequency

The general rule is that this message is sent as soon as one event unit for the corresponding phase finishes and the message becomes INTERIM just at the end of the event unit. At the end of the phase (when there are not more event units/games to compete), the message is then sent as OFFICIAL. The official/unofficial status can be seen in ODF header (ResultStatus attribute).

Trigger also after any major change.

However, if there is any kind of sport specific rule, it may be overridden in each of the ODF Sport Data Dictionaries: example to send interim results, partial results, etc.

## 4.2.6.4. Message Structure

The Pool Standings message has the same message structure as the Phase Results message.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

## Optional message elements referenced in each ODF Sport Data Dictionary

Competitor /ExtendedResults and its child element ExtendedResult

Composition /Athlete /ExtendedResults and its child element ExtendedResult

## 4.2.6.5. Message Values

The message values are the same as those explained in the Phase Results message sent at phase level.

Be aware of all mandatory attributes that will have to appear in any ODF Pool Standings message, and of those attributes with an optional appearance. In this last situation, each of the ODF Sport Data Dictionaries will have to explicitly mention and define the use of the optional attributes.

## 4.2.6.6. Message sort

The message sorting order is the same as that explained in the Event Unit / Phase Results messages.

# 4.2.7. Event Final Ranking

#### 4.2.7.1. Description

The event final ranking is a message containing the final results and ranking at the completion of one particular event, either competing as single athletes or as aggregated athletes according to the team definition as it can be seen in the List of teams' message in the ODF Central Messages Interface Document.

The final ranking message is a generic message for all sports, including the full event final result for all competitors that were either ranked, got an Invalid Rank Mark (disqualified, etc.), or both.

The mandatory attributes and mandatory elements defined in this message will have to be used by all the sports, although each ODF Sport Data Dictionary will have to explain with further detail the optional attributes or optional elements of the message.

Depending on the sport rules it may include all competitors in the competition as all can be ranked (as in Marathon) or may only include this with a final ranking as other are unranked (as in tennis).

#### 4.2.7.2. **Header Values**

The following table describes the ODF header attributes

Attribute	Value	Comment		
DocumentCode	DDGEEE000	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event  Each ODF Sport Data Dictionary will have to complete the explanation regarding to this		
		attribute		
DocumentType	DT_RANKING	Event Final ranking		
ResultStatus	CC @ResultStatus	Result status		
Version	1V	Please, refer to the ODF header definition		
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition		
Date	Date	Please, refer to the ODF header definition		
Time	MillisTime	Please, refer to the ODF header definition		
LogicalDate	Date	Please, refer to the ODF header definition		
Venue	CC @VenueCode	Venue code where the message is being generated		
Serial	Numeric	Please, refer to the ODF header definition		

#### **Trigger and Frequency** 4.2.7.3.

The general rule is that this message is sent as soon as the message becomes unofficial just at the end of the last event unit of one particular event, and afterwards when the message becomes official. The official/unofficial status can be seen in ODF header (ResultStatus attribute).

Trigger also after any major change.

If there is any kind of sport specific rule, it may be overridden in each of the ODF Sport Data Dictionaries: example to send interim results, partial results, etc.

### 4.2.7.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

## Optional message elements referenced in each ODF Sport Data Dictionary

# 4.2.7.5. Message Values

Be aware of all mandatory attributes that will have to appear in any ODF Final ranking message, and of those attributes with an optional appearance. In this last situation, each of the ODF Sport Data Dictionaries will have to explicitly mention and define the use of the optional attributes.

Element	Attribute	M/O	Value	Comments		
Competition	Code	M	CC @Competition	Unique ID for competition		
EventInfo (Event info item associated	Туре	М	See table comment	Type (categorization) of EventInfo.		
to the event)	Code	M	See table comment	Key of the EventInfo element, to uniquely identify this element.		
	Pos	0	See table comment	An optional numerical value used to sort event info items with same type and code (the attribute Pos could be the period, as example).		
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced EventInfo.		
	Туре	M	See table comment	Type (categorization) of the Extension		
EventInfos /EventInfo /Extensions /Extension	Code	М	See table comment	Key of the Extension, to uniquely identify this element.		
(Extensions of UnitInfos)	Pos	0	Numeric See table comment	An optional numerical value used to sort extended data's extensions		
	Value	0	See table comment	Value of the @Code (+ @Pos) referenced Extension.		
	Rank	0	Text	Rank of the competitor in the result.		
Result	RankEqual	0	See table comment Y	It identifies if a rank has been equalled.		
	ResultType	0	See table comment	Type of the @Result attribute		
(For any event final ranking message, there should be	Result	0	See table comment	The result of the competitor in the event		
at least one competitor being awarded a result for	IRM	0	See table comment	The invalid rank mark, in case it is assigned		
the event)	SortOrder	M	Numeric See table comment	Used to sort all results in an event (based on rank, but to break rank ties, etc.). It is mainly used for display purposes.		
Result /Competitor (Competitor related to one final event result.	Code	M	S(20) with no leading zeroes ,NOC ID or TBD	Competitor's ID, In the case of NOC or NPC it will be the NOC ID, TBD in case that the competitor is unknown or not exists		
Refer to chapter 4.3 for competitors' rules)	Туре	M	T,A, N	T for team A for athlete N for NOC's or NPC's		
Result /Competitor /ExtendedResults	Туре	М	See table comment	Type (categorization) of the ExtendedResult.

(Extensions of team			See table comment	extensions
member's or individual	Value	0	See table comment	Value of the @Code (+ @Pos)
	,	, –		

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

# 4.2.7.6. Message sort

There is not any special sort order requirement for this message. Usually, Result @SortOrder will be the attribute used to sort the results, as the attribute @SortOrder is defined in each of the ODF Sport Data Dictionaries.

## 4.2.8. Official Communication

#### 4.2.8.1. Description

The Official Communication message contains a release of an Official Communication, which contains jury decisions, competition management decisions, etc.

Official Communications are numbered by sport separately, not globally.

#### 4.2.8.2. **Header Values**

The following table describes the ODF header attributes (please, be aware of the DocumentSubtype attribute, used to identify the message along with the DocumentCode and DocumentType attributes).

Attribute	Value	Comment
DocumentCode	DD0000000	DD should be defined according to CC @Discipline
DocumentSubcode	NOTICE or SPORT_NOTICE or RINCIDENT	NOTICE: Used for Official Communications SPORT_NOTICE: Used for Sport
		Communications  RINCIDENT: Race Incident type, for
		sports that have this type of information.
DocumentType	DT_COMMUNICATION	Official communication message
DocumentSubtype	Numeric	Please, refer to the ODF header definition Send incremental number in the case that DocumentSubcode is NOTICE or SPORT_NOTICE (one for each different Item) Send always 1 in the case that DocumentSubcode is RINCIDENT
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

### 4.2.8.3. **Trigger and Frequency**

The message should be generated not later than 15 minutes after the jury or any other body decision.

- In case of Race Indicent:
  - o After each incident is logged

Trigger also after any major change.

# 4.2.8.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

There are not optional elements according to the rules detailed in chapter 5.1 and 4.3.

	Phase	M	CC @Phase	Phase ID It will be sent if the official communication applies to the whole discipline, gender, event, and phase or to a lower level.

Element	Attribute	M/ O	Value	Comments
	Unit	M	CC @Unit	Unit ID It will be sent if the official communication applies to the whole discipline, gender, event, phase, and unit.
Limit	DateTime	0	DateTime	Time Limit for the filing of protest
RIncidents	AfterDistance	0	Text	Description of the Current Distance of the last incident
RIncidents /RIncident	Code	М	Numeric	Sequencial number to identify each Race incident
	Distance	0	S(25)	Distance or segment where incident has happened
	When	М	Free Text	When the incident has happened, i.e. "Before start, Lap 1,"
RIncidents /RIncident/Incident	-	М	Free Text	Free text that includes a description of the incident.
Note (Include just if notes are added)	-	0	Free Text	Free text to include the different additional notes

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

## 4.2.8.6. Message sort

There are not specific sorting requirements

## 4.2.9. Statistics

## 4.2.9.1. Description

The Statistics message contains a list of statistics for a competitor (could be a single athlete or a team), that apply at one DocumentCode level, which could be for an event unit, a phase or an event.

There will be a separate message (identified by the header's Subtype and DocumentSubtype) for every table where multiple statistics apply (e.g.: leading points' scores, leading red cards, etc.).

### 4.2.9.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	@ RSC	Depending on the statistics, the RSC could be: DD0000000 (sent at discipline level) DDGEEE000 (sent at event level) DDGEEEPUU (sent at phase level) DDGEEEPUU (sent at event unit level)  Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute
DocumentSubcode	To be defined in each ODF Data Dictionary	This is an optional attribute Please, refer to the ODF header definition Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute (it can be useful for example to separate statistics by NOC).
DocumentType	DT_STATS	Statistics message
DocumentSubtype	To be defined in each ODF Data Dictionary	Please, refer to the ODF header definition
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

## 4.2.9.3. Trigger and Frequency

Each ODF Sport Data Dictionary should specify when to make use of this report, if it is necessary for that sport.

## 4.2.9.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

Optional message elements referenced in each ODF Sport Data Dictionary
Competition /Stats /StatsItems and its child element StatsItem
Competition /Stats /StatsItems /StatsItem /ExtendedStat
Stats /Competitor
Competitor /StatsItems and its child element StatsItem
Competitor /StatsItems /StatsItem
Competitor StatsItems /StatsItem /ExtendedStat
Competitor /Composition /Athlete /StatsItems and its child element StatsItem
Competitor /Composition /Athlete /StatsItems /StatsItem /ExtendedStat

As you can see, <u>all the main message's root elements are basically optional</u>, and therefore this message will be strongly related to each of the ODF Sport Data Dictionary documents and it can be changed very specifically for the different disciplines that may require this report.

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

#### 4.2.9.6. Message sort

Sort according the @Order attributes.

### 4.2.10.Event's Medallists

### 4.2.10.1. Description

The "Event's Medallists" contains the list of medallists awarded for one particular event.

### 4.2.10.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	DDGEEE000	DD should be according to CC @Discipline G should be according to CC @DisciplineGender EEE should be according to CC @Event
DocumentType	DT MEDALLISTS	Event's Medallists
ResultStatus	CC @ResultStatus	It indicates whether the result is official or partial
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

## 4.2.10.3. Trigger and Frequency

The message should be sent with ResultStatus=PARTIAL when the information of the medallist is know but the final event Unit is not finished.

The message should be sent with ResultStatus=OFFICIAL when the medallists are official known when the final event unit finishes. For some sports, bronze medals are known before the end of the final event unit, and in this case the message must be sent before: the first time to send the bronze medallists, and the second time to send all the medallists. In this situation, the ODF Data Dictionaries for those sports where it may happen will extend this message to indicate in their respective Trigger and Frequency chapters this possibility.

Trigger also after any major change.

### 4.2.10.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

Optional message elements referenced in each ODF Sport Data Dictionary							
Competitor /Officials and its child element Official							
Competitor /ExtCompMedals and its child element ExtCompMedal							
Competitor /Composition ExtAthleteMedal	/Athlete	/ExtAthleteMedals	and	its	child	element

## 4.2.10.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition
Medal	Code	M	CC @MedalType	Medal type gold, silver or bronze All the Competitors with the same CC@MedalType must not be grouped in the same element (it applies in the equalled medals)

Element	Attribute	M/O	Value	Comments
	Phase	M	CC @Phase	Phase code in which this medal was awarded.
				It is used in case of some disciplines (e.g: Ice Hockey or Basketball), where the bronze medal and the gold medal are awarded in different event units.
	Unit	М	CC @Unit	Unit code in which this medal was awarded.
				It is used in case of some disciplines (e.g: Ice Hockey or Basketball), where the bronze medal and the gold medal are awarded in different event units.
On man atitan	Code	M	S(20) with no leading zeroes	Competitor's ID
Competitor	Туре	М	T, A	T for team A for athlete
(Refer to chapter 4.3 for competitors' rules).	Order	М	Numeric	Competitor order (Send 1 by default) and in the case of tie the order will be defined for the IOC rules.
Competitor/ Officials /Official	Code	M	S(20) with no leading zeroes	Official ID for the official code
	Function	0	See table comment	Optionally, send official function
(Officials in the case there are officials receiving event's medals)	Order	0	See table comment	Optionally, send official order (if more than one official is needed).
Competitor /ExtCompMedals	Туре	М	See table comment	Type (categorization) of the ExtCompMedal.
/ExtCompMedal	Code	M	See table comment	Key of the ExtCompMedal, to uniquely identify this element.
(Team competitor's extended medals information, according	Pos	0	Numeric See table comment	An optional numerical value used to sort extended data with same type and code.
to the competitor's rules in chapter 4.3)	Value	0	See table comment	Value of the @Code (+ @Pos) referenced ExtCompMedal.
Competitor	Code	M	S(20) with no leading zeroes	Athlete's ID, corresponding either to a team member or a single athlete
/Composition /Athlete (Refer to chapter 4.3 for competitors' rules).	Order	М	Numeric	Order attribute used to sort team members in a team (if Competitor @Type="T") or 1 if Competitor @Type="A".
Competitor /Composition/ Athlete	Туре	М	See table comment	Type (categorization) of the ExtAthMedal.
/ExtAthMedals /ExtAthMedal	Code	М	See table comment	Key of the ExtAthMedal, to uniquely identify this element.
(Team member's or individual athlete's	Pos	0	Numeric See table comment	An optional numerical value used to sort extended data with same type and code.
extended result, depending on whether Competitor @Type="T" or Competitor @Type="A" according to competitors' rules in chapter 4.3.)	Value	0	See table comment	Value of the @Code (+ @Pos) referenced ExtAthMedal.

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

# **4.2.10.6.** Message sort

Message should be sorted by medal type. Moreover, in case of tie or for the team's members, the order will be according to a medal order (given by each sport rule).

## 4.2.11.Medallists by Discipline

### 4.2.11.1. Description

The "medallists by discipline" contains the list of medallists for one discipline, up to the moment of the message generation.

The "medallists by discipline" message is a complete message that increments its content as more medals are being awarded during the competition. The arrival of this message resets the entire previous "medallists by discipline" information.

### 4.2.11.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment				
DocumentCode	DD0000000	DD should be defined according to CC @Discipline				
DocumentType	DT_MEDALLISTS_DISCIPLINE	Medallists by discipline				
Version	1V	Please, refer to the ODF header definition				
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition				
Date	Date	Please, refer to the ODF header definition				
Time	MillisTime	Please, refer to the ODF header definition				
LogicalDate	Date	Please, refer to the ODF header definition				
Venue	CC @VenueCode	Venue code where the message is being generated				
Serial	Numeric	Please, refer to the ODF header definition				

## 4.2.11.3. Trigger and Frequency

"Medallists by discipline" is sent as soon as one new medal is officially known (but not necessarily awarded) for any of the events that make part the competition schedule. As the competition progresses, successive changes in the medallists by discipline information are done. Therefore, it could be that this message is resent several times, as result of the normal operation. In this case, it has to be assumed that the message resets the complete previous medallists by discipline information.

Trigger also after any major change.

#### 4.2.11.4. **Message Structure**

The message structure is the same as in the DT_MEDALLISTS_DAY message, as it is described in the ODF Central Messages Interface Document.

#### 4.2.11.5. **Message Values**

Message values are the same as in the DT_MEDALLISTS_DAY message, as it is described in the ODF Central Messages Interface Document.

#### 4.2.11.6. Message sort

Message sorting should be the same as in the DT_MEDALLISTS_DAY message, as it is described in the ODF Central Messages Interface Document.

### **4.2.12.Records**

#### 4.2.12.1. **Description**

This message usually applies for World and Olympic records but may apply for other records depending on the sport.

The message contains the list of all current records, as well as the previous records being beaten (becoming obsolete) and the invalidated records.

#### 4.2.12.2. **Header Values**

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	DDGEEPUU	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event P according to CC @Phase UU according to CC @Unit  Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute. It will be the event unit RSC where the record is being broken
DocumentType	DT_RECORD	Records
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

#### 4.2.12.3. **Trigger and Frequency**

In general, this message should be sent as soon as a record is broken in the unit or as soon as a record is invalidated. However, it will be necessary to include all current valid records in case the record equals a previous record, including the event units where they may have been broken. Note that the results of this message are not

really "officials" until after the games (in most sports), that's why we will not use the "official or unofficial" status as it can be confused for the client.

It will be also triggered in the case of invalidating previously sent records (owing to DSQ, etc.).

Trigger also after any major change.

## 4.2.12.4. Message Structure

The following elements describe the message structure from the OdfBody element.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

## Optional message elements referenced in each ODF Sport Data Dictionary

optional elements according to the general rule described in			See table comment	with same type and code (like split times).
chapter 4.3)	Value	0	See table comment	Value of the @Code (+ @Pos) referenced extended record data.
Record /RecordType /RecordEntries/ RecordEntry/ /Competitor/Composition /Athlete /RecordData	Historical	М	Y, N	Send 'Y' if the record for competitor being listed in the message was not achieved during the current competition.
(Individual athlete's record data, according to competitors' rules in chapter 4.3.				Send 'N' if the record for the competitor being listed in the message was achieved during the current competition

Element	Attribute	M/O	Value	Comments
It will have to be sent always if Competitor @Type="A".	RSC	0	Concatenation of the following:	Send always (Mandatory) in the case Historical='N'.
However, if Competitor  @Type="T", it should not be used			CC @Discipline CC @DisciplineGender CC @Event	It should include the event unit in the current competition where the record was broken (as the event unit code is being sent in ODF header).
Therefore, it is not used for team members in this case, just			CC @Phase CC @Unit	,
single athletes)	Country	М	CC @Country	It should include the country code where the record was broken
	Place	M	S(40)	It should include the place (town or city) where the record was broken (example: "Salt Lake City").
	Date	M	YYYYMMDD	It should include the date where the record was broken (for the current competition, the date will be assumed as the date for the @RSC attribute according to its schedule)
	Time	0	MillisTime	Send always (Mandatory) in the case Historical='N'.
	Confirmed	0	Y, N	Send in the case Historical='Y' and if it is being requested by the specific discipline, since some historical records / record types may not be confirmed
	Event	0	S(40)	Send in the case Historical='Y'.
				Send the text of the event name where the record was broken (example: "World Championships",
<u></u>	1	<u> </u>		"Olympic Games", etc.).

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

#### 4.2.12.6. Message sort

The following order applies:

- RecordEntry
  - o First C, second P
- Competitor, in the case RecordEntry='C'
  - o Send first the competitor whose Competitor /RecordData @RSC is the ODF header (latest achieved record).

### 4.2.13.Brackets

#### 4.2.13.1. Description

The brackets message contains the brackets information for one particular event. It is used in events where there is a necessity to know in advance how successive event units will be filled as the competition progresses. In the early stages of the competition, it indicates how each of the event units will be built from the winners/losers, or other competition rules of the previous event units.

#### 4.2.13.2. **Header Values**

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	DDGEEE000	DD should be according to CC
		@Discipline
		G should be according to CC
		@DisciplineGender
		EEE should be according to CC @Event
DocumentType	DT_BRACKETS	Brackets
ResultStatus	CC @ResultStatus	Result status
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production	Please, refer to the ODF header definition
	"T"-Test	
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

#### 4.2.13.3. **Trigger and Frequency**

In general, this message should be sent at the very beginning of a competition, as soon as a brackets graph can be established.

The message should be sent when a match/event unit is completed, both when at Unofficial and Official status. Therefore it is triggered twice for each event unit, once when Unofficial and once when Official. The message should be updated including the information of each of the competitors being placed in the different bracket items.

During the competition, the @ResultStatus attribute will vary depending on the competition status.

- State that ResultStatus = "INTERMEDIATE" until the last event unit (GM Match) is Unofficial (i.e. for all event units up until the Gold Medal match is completed for an event)
- State that ResultStatus = "UNOFFICIAL" when DT BRACKETS is sent when the last event unit for an event (GM match) has Unofficial status.
- State that ResultStatus = "OFFICIAL" when DT BRACKETS is sent when the last event unit for an event (GM match) has Official status.

Trigger also after any major change.

## 4.2.13.4. Message Structure

The following elements describe the message structure from the OdfBody element.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

competitors' rules in chapter 4.3.)				

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

## **4.2.13.6.** Message sort

The following order applies:

- Every ODF Sport Data Dictionary making use of this message should specify the order from Bracket @Code if it is possible more than one "@Code" attribute for this element.
- Every ODF Sport Data Dictionary should specify the order of BracketItems according to its @Code attribute. It will usually be referred to BracketItems /BracketItem /Unit @Phase (all BracketItem should be grouped by the BracketItem /Unit @Phase attribute).
- Then, sort by the BracketItem /Unit @Unit attribute according to its scheduled start time.

## 4.2.14. Discipline/venue good morning

### 4.2.14.1. Description

The "discipline/venue good morning" is a message to indicate the start of day of the operations for one specific discipline in one specific venue within a logical day. All messages produced centrally will share a single DT_GM (with DocumentCode GL0000000 and Venue PDC).

### 4.2.14.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	CC @GMGNCode	Discipline/venue code, consisting of DD0VVV000, where DD stands for discipline, VVV for venue
DocumentType	DT_GM	Discipline/venue good morning
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Please, refer to the ODF header definition
Serial	Numeric	Please, refer to the ODF header definition

### 4.2.14.3. Trigger and Frequency

"Discipline/venue good morning" is sent as soon as the operations for one particular logical day are about to begin, and always before any other message for that logical day.

### 4.2.14.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition		
	Code	
	Config	
		SDelay
		CompetitionDay

## 4.2.14.5. Message Values

Element Attribute	M/O	Value	Comments
-------------------	-----	-------	----------

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition
Config	SDelay	M	Numeric	Delay in seconds for which a DT_SERIAL message will be generated. This value is set to 180 seconds
	CompetitionDay	0	Date	Competition date for that transmission, valid until the next DT_GN. This attribute will be optional and only requested during testing activities, in which the simulated date does not match the system date. In Games time and Test Events, this attribute will not be sent as the system date applies.

# **4.2.14.6.** Message sort

There is no sort order for this message.

## 4.2.15. Discipline/venue good night

### 4.2.15.1. Description

The "discipline/venue good night" is a message to indicate the end of day of the operations for all the disciplines with some kind of competition within a logical day. All messages produced centrally will share a single DT_GN (with DocumentCode GL0000000 and Venue PDC).

### 4.2.15.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	CC @GMGNCode	Discipline/Venue code, consisting of DD0VVV000, where DD stands for discipline, VVV for venue
DocumentType	DT _GN	Discipline/venue good night
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Please, refer to the ODF header definition
Serial	Numeric	Please, refer to the ODF header definition

### 4.2.15.3. Trigger and Frequency

"Discipline/venue good night" is sent as soon as the operations for one particular logical day are finished, to formally indicate the end of that logical day.

## 4.2.15.4. Message Structure

The message structure just includes an OdfBody element (with their ODF header attributes, but no other hierarchical element below OdfBody.

## 4.2.15.5. Message Values

There are not attributes to be defined in this message.

## **4.2.15.6.** Message sort

There is no sort order for this message.

## 4.2.16. Discipline Configuration

### 4.2.16.1. Description

This message defines various static data related to a discipline. The sum of all the data can be seen as a set of useful information and as a kind of configuration of one discipline (i.e.: Qualifying Rank Date, distance between intermediate points, etc). It is similar to the kind of information appearing in the UnitInfos elements of the DT_START_LIST and DT_RESULT messages in the case of Event Units, but with the particularity that the information in those messages is more oriented to PiT data (data that has traditionally been included in PiT reports), while the information in this message is more focused to other generals aspects of the discipline.

### 4.2.16.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	DD0000000	DD should be according to CC @Discipline
DocumentType	DT_CONFIG	Discipline Configuration message
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

### 4.2.16.3. Trigger and Frequency

The message should be sent prior to any ODF Sports message, if requested by one particular discipline (ODF Sport Data Dictionary).

Trigger also after any major change.

## 4.2.16.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

Optional message elements referenced in each ODF Sport Data Dictionary

ExtendedConfigItem

				referenced ExtendedConfigItem.

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

# **4.2.16.6.** Message sort

There is not a general message sorting rule, except for the ones that might be defined in each ODF Sport Data Dictionary

## 4.2.17. Federation Ranking

### 4.2.17.1. Description

The "Federation Ranking" message contains the information about the ranking of the different events for one particular discipline of <u>both competing and non-competing athletes in the current games</u>.

### 4.2.17.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	DDG000000	DD should be according to CC @Discipline
		G should be according to CC @DisciplineGender
DocumentType	DT_FED_RANKING	Federation ranking
DocumentSubtype	To be defined in each ODF Data Dictionary	It indicates the type of Federation Ranking
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

## 4.2.17.3. Trigger and Frequency

When a venue begins to operate a particular sport starts, after results are official and after any major change.

## 4.2.17.4. Message Structure

The following elements describe the message structure from the OdfBody element.

The elements that are optional in this message according to the rules detailed in chapter 5.1 and 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

Optional message elements referenced in each ODF Sport Data Dictionary

## **4.2.17.6.** Message sort

The following sort order applies:

Every node having an @Order attribute will be sorted by this attribute whenever it is informed

### 4.2.18.Event Unit Weather Conditions

### 4.2.18.1. Description

The weather result condition is a message containing the weather conditions in the Event Unit.

#### 4.2.18.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	DDGEEEPUU	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event P according to CC @Phase UU according to CC @Unit  Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute
DocumentType	DT_WEATHER	Weather conditions in the match
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue Code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

### 4.2.18.3. Trigger and Frequency

The general rule is that this message is sent when data of weather for a match change.

### 4.2.18.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

Competition					
	Code				
	Weather				
		Conditions (1N)			
			Code		
			Humidity		
			Wind_Direction		
			Prec_Type		

Condition (0,1,2,3)

N depends on the @Unit
N depends on the @Code+@Unit+@Type
N depends on the @Code+@Unit

### 4.2.18.6. Message sort

There is not any special sort order requirement for this message. Usually, Conditions@code will be the attribute used to sort the conditions.

### 4.2.19. Serial Message

#### 4.2.19.1. Description

The Serial message is used to inform what is the last serialization of today's logical date messages that has been sent for one discipline taking place in one venue. All messages produced centrally will share a single DT_SERIAL (with DocumentCode GL0000000 and Venue PDC).

#### 4.2.19.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	CC @GMGNCode	Discipline/venue code, consisting of DD0VVV000, where DD stands for discipline, VVV for venue
DocumentType	DT_SERIAL	Serial message
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Always "-1"

#### 4.2.19.3. Trigger and Frequency

Send a DT_SERIAL message following the parameters as sent in the DT_GM message. It was a control message.

The last message before a DT_GN message must be a DT_SERIAL message.

### 4.2.19.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition		
	Code	
	Serial(0N)	
		DocumentCode
		DocumentSubcode
		DocumentType
		DocumentSubtype
		DateTime
		Serial
		Version

#### 4.2.19.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	M	CC @Competitio n	Unique ID for competition
Serial	Documentcode	М	S(9)	Please, refer to the ODF header definition
	DocumentSubcode	0	S(10)	Please, refer to the ODF header definition
	DocumentType	M	S(30)	Please, refer to the ODF header definition
	DocumentSubtype	0	S(20)	Please, refer to the ODF header definition
	DateTime	M	DateTime	Date Time when meaasge has been sent
	Serial	M	Numeric	The last serial number of the PiT transmission for a DocumentCode +DocumentType message.
	Version	М	Numeric	Please, refer to the ODF header definition

### 4.2.19.6. Message sort

Order by DocumentCode + DocumentSubcode + DocumentType + DocumentSubtype.

### 4.2.20.Photofinish message

### 4.2.20.1. Description

The Photofinish message is an image file encapsulated in a XML message for one particular event unit. This Photofinish message is a generic message for all sports.

#### 4.2.20.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	@ RSC	Depending on the message, the RSC could be: DD00000000 (sent at discipline level) DDG0000000 (sent at gender level) DDGEEE000 (sent at event level) DDGEEEP00 (sent at phase level) DDGEEEPUU (sent at event unit level)
DocumentSubcode	S(10)	For those RSC that might require more than one picture, the picture number will be indicated here.
DocumentType	DT_PHOTOFINISH	Photofinish message
Version	1V	Please, refer to the ODF header definition
ResultStatus	S(15)	Please, refer to the ODF header definition
Language	S(3)	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition

Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

### 4.2.20.3. Trigger and Frequency

The general rule is that this message will be sent depending on the trigger and frequency defined in ORIS (or PRIS).

Trigger also after any major change.

#### 4.2.20.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition			
	Code		
	ImageData		
	PhotoFinish		
		Version	
		Revision	

#### 4.2.20.5. Message Values

Be aware of all mandatory attributes that will have to appear in any ODF Photofinish message.

Element	Attribute	M/O	Value	Comments
Competition	Code	M	CC @Competition	Unique ID for competition
ImageData	-	М	Free Text	The ImageData element may have a body consisting of one Base64-
PhotoFinish	Version	М	Numeric	encoded report (a jpeg file)  Document version: 19999
PhotoFinish	Revision	M	Numeric	Document revision: 19999

#### **4.2.20.6.** Message sort

There is not any message sorting requirement for this message.

### 4.2.21.Press Photofinish message

#### 4.2.21.1. Description

The Press Photofinish message contains a link to the Press Diffusion Document for a particular event unit. This photo finish document is a PDF containing the photo finish

picture (uncompressed) which includes judgment markers as well as all necessary additional information.

This Photofinish message is a generic message for all sports.

#### 4.2.21.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	@ RSC	Depending on the message, the RSC could be: DD00000000 (sent at discipline level) DDG0000000 (sent at gender level) DDGEEE000 (sent at event level) DDGEEEP00 (sent at phase level) DDGEEEPUU (sent at event unit level)
DocumentSubcode	S(10)	For those RSC that might require more than one picture, the picture number will be indicated here.
DocumentType	DT_PRESSPHOTO FINISH_LK	Press Photofinish message
Version	1V	Please, refer to the ODF header definition
ResultStatus	S(15)	Please, refer to the ODF header definition
Language	S(3)	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
Serial	Numeric	Please, refer to the ODF header definition

### 4.2.21.3. Trigger and Frequency

The general rule is that this message will be sent depending on the trigger and frequency defined in ORIS (or PRIS).

Trigger also after any major change.

### 4.2.21.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition		

Code		
PhotoFinish		
	Version	
	Revision	
	Link	

### 4.2.21.5. Message Values

Be aware of all mandatory attributes that will have to appear in any Press Photofinish message.

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition
PhotoFinish	Version	М	Numeric	Document version: 19999
PhotoFinish	Revision	М	Numeric	Document revision: 19999
PhotoFinish	Link	М	S(255)	URL of the link to the document

### 4.2.21.6. Message sort

There is not any message sorting requirement for this message.

## 5. Real Time Feed

## 5.1. Overall perspective

ODF-RT is the feed that provides real time data to the user.

## 5.1.1. Real Time feed list of messages

ODF-RT messages are very similar to the equivalent PiT messages. Equivalent messages share message structure.

The following table lists the ODF-RT feed messages

Message Type	Message name
DT_RT_RESULT	RT Event Unit Results
DT_RT_CUMULATIVE_RESULT	RT Cumulative Results
DT_RT_CLOCK	RT Clock
DT_RT_GPS_DATA	RT GPS Data
DT_RT_GM	RT Discipline/venue good morning
DT_RT_GN	RT Discipline/venue good night
DT_RT_KA	RT Discipline/venue keep alive

#### 5.1.2. Real Time messages definition

There are two types of Real Time messages:

- RT Control messages
- RT Content messages

#### 5.1.2.1. RT Control messages

RT Control messages indicate the start and end of an ODF-RT transmission or session and inform that the communication is still available.

- DT_RT_GM: The RT Good Morning message indicates the start of a Real Time transmission at a venue. The message includes some configuration parameters.
- DT_RT_KA: The RT Keep Alive message is sent when the frequency of RT content messages is low. The message allows the user to detect desynchronization or connections breaks.
- DT_RT_ GN: The RT Good Night message indicates the end of a Real Time transmission at a venue.

Each day more than one ODF-RT transmission or session can take place at the same venue.

#### 5.1.2.2. RT Content messages

The content messages provide the real time data. The real time data is the same data provided by the equivalent Point in Time Messages but with a different frequency. The common data will use the same elements and attributes.

The ResultStatus attribute in the message header indicates the type of data available inside the Content Messages:

<u>"Live update"</u>: The message contains only incremental data. There are the following considerations for this kind of messages:

- If applicable, the first message sent will contain static information.
- Since it is an incremental message, message consumer must not update or delete data that is not included in the message because the information not being updated is not included in a new message.
- All competition results are provided with this kind of messages.
- <u>"Live mandatory":</u> Like the "Live Full" message, it includes all data provided until now in "Live update" messages. Message producer sends this message, when previously send data must be deleted or corrected. ODF customers must process these messages allways.
- <u>"Live full"</u>: The message includes all data provided until now in "Live update" and "Live mandatory" messages. ODF customers must process these messages when they need to resynchronice.

• "Live last": Like the "Live Full" message, it includes all data provided until now in previous messages. The message does not include any new data and indicates that no new RT messages of the current type are expected. After the "Live Last" message corrections of previously send results (for example a disqualified competitor) are available in the PiT feed only.

It is a strong relationship in the data sent between the following standard ODF-PiT messages and the corresponding ODF-RT messages:

Standard ODF-PiT	ODF-RT	
DT_RESULT	DT_RT_RESULT	
DT_CUMULATIVE_RESULT	DT_RT_CUMULATIVE_RESULT	

### 5.1.3. Real Time message triggers

Each ODF Sport Data dictionary defines the ODF-RT triggers for "Live update" ODF-RT messages. Additionally:

- Message producer sends "Live Full" messages periodically. DT_RT_GM control message defines the exact frequency.
- Message producer sends "Live Mandatory" to delete or corrrect data.
- Message producer sends the "Live Last" message to indicate that no new "Live update" messages are expected.

### 5.2. RT Discipline/venue good morning

#### 5.2.1. Description

The RT Discipline/venue good morning message is used to inform that the RT transmission for discipline taking place in one venue is about to begin. This message is also used to inform some RT parameters.

#### 5.2.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	CC @GMGNCode	Discipline/venue code, consisting of DD0VVV000, where DD stands for discipline, VVV for venue
DocumentType	DT_RT_GM	RT Discipline/venue good morning
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
RTSerial	1	This message should be the first message in a RT transmission. For each RT transmission, start always by 1.
Serial	Numeric	Please, refer to the ODF header definition

## 5.2.3. Trigger and Frequency

This message should be the first RT message to be sent, 5 minutes before the start of the first event unit of the RT session.

## 5.2.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition		
	Code	
	RTConfig	
		KADelay
		LFDelay
		DelayOffSet

## 5.2.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition
RTConfig	KADelay	M	Numeric	Delay in seconds for which a keep- alive message will be generated if
				there is not other real time activity.
				This value is set to 60 seconds
	LFDelay	M	Numeric	Delay in seconds for which a live full
				results message will have to be
				generated for resynchronization
				purposes.
	DelayOffSet	M	Numeric	Delay offset in seconds to be added to the KADelay and LFDelay parameters, for a final customer to assume the connection is broken (including perhaps the loss of a live full message).
				It considers the delay time from the moment when a keep alive or a live full message is generated, and it successfully arrives to the client.
				This value is set to 60 seconds

## 5.2.6. Message sort

There is not any message sorting requirement for this message.

## 5.3. RT Discipline/venue good night

### 5.3.1. Description

The RT Discipline/venue good night message is used to inform that the RT transmission for one discipline taking place in one venue is finished. It is assumed that a RT transmission is finished if there are not expected any new RT messages including content (DT_RT_RESULT/DT_RT_CUMULATIVE_RESULT) for the next 10 minutes and one event unit is finished in the venue. No other RT messages are expected for a particular discipline/venue until the next RT Discipline/venue good morning message.

#### 5.3.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment	
DocumentCode	CC @GMGNCode		
DocumentType	DT_RT_GN	RT Discipline/venue good night	
Version	1V	Please, refer to the ODF header definition	
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition	
Date	Date	Please, refer to the ODF header definition	
Time	MillisTime	Please, refer to the ODF header definition	
LogicalDate	Date	Please, refer to the ODF header definition	
Venue	CC @VenueCode	Venue code where the message is being generated	
RTSerial	Numeric	The last serial number of the RT transmission. Next RT Discipline/venue good morning message will start by 1	
Serial	Numeric	Please, refer to the ODF header definition	

### 5.3.3. Trigger and Frequency

Trigger when an event unit has completed (that is, a LIVE_LAST has been sent) and the next scheduled event unit does not start for an hour or more, send a DT_RT_GN message to end the current real-time session.

### 5.3.4. Message Structure

The message structure just includes an OdfBody element (with their ODF header attributes, but no other hierarchical element below OdfBody.

## 5.3.5. Message Values

There are not attributes to define in this message.

## 5.3.6. Message sort

There is not any message sorting requirement for this message.

## 5.4. RT Discipline/venue keep alive

### 5.4.1. Description

The RT Discipline/venue keep-alive message is used to inform that the RT transmission for one discipline taking place in one venue is still working, whenever there is not an activity of RT content messages (DT_RT_RESULT / DT_RT_CUMULATIVE_RESULT).

#### 5.4.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	CC @GMGNCode	Discipline/venue code, consisting of DD0VVV000, where DD stands for discipline, VVV for venue
DocumentType	DT_RT_KA	RT Discipline/venue keep alive
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
RTSerial	Numeric	Always "-1"
Serial	Numeric	Please, refer to the ODF header definition

### 5.4.3. Trigger and Frequency

Send a DT_RT_KA message following the parameters as sent in the DT_RT_GM message. Therefore, the message will be triggered according to these parameters, after the last RT message; no matter it was a RT control message or a RT content message (DT_RT_RESULT / DT_RT_CUMULATIVE_RESULT). Opposite, this message should not be triggered if there is a frequency of RT messages higher than these predefined parameters.

#### **5.4.4. Message Structure**

The following elements describe the message structure from the OdfBody element.

Competition		
	Code	
	Config	

L_RTSerial
------------

## 5.4.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	M	CC @Competition	Unique ID for competition
Config	L_RTSerial	M	Numeric	The last RT serial number of the RT
				transmission.

## 5.4.6. Message sort

There is not any message sorting requirement for this message.

#### 5.5. RT Event Unit Results

### 5.5.1. Description

This message is analogous to the Event Unit Results (DT_RESULT) message, having the following main differences:

- The codes used in the extended data in both, DT_RESULT and DT_RT_RESULT messages might be the same, but each message could have more or less codes. However, if the same codes are used, they both are referring to the same data.
- The "Result" element is optional because there is data such as the weather information known before any result is awarded and other information that might be sent not related to any results.

ResultStatus should be always any "LIVE_FULL" "LIVE_MANDATORY", "LIVE_LAST" or "LIVE_UPDATE", according to the definition in chapter 6.1 and ResultStatus codes as seen in chapter 3.

If the message is sent as LIVE_UPDATE:

- It will be an incremental message, and therefore, it is not full self-content. This message is used to update information. For this reason, no data will be reset/updated unless it is clearly identified and resent in this message (and therefore, modifying its old value) in exception of statistic related data which will always include the latest value for all available statistics attributes even if certain statistics attributes didn't change after the last action.
- For one particular trigger, several data could be updated at the same time for one particular trigger. In order to avoid big messages that might have a negative impact in the performance, all systems should be able to be configured to generate several smaller messages, with clusters of data, instead of one single big message, according to a particular configuration (message size). Each ODF Sport Data Dictionary should give more information about it.
- In general, it will not contain data unless there is a data modification in exception of the statistic related data.

If the message is sent as LIVE_FULL:

• It will be a self-content message. If a system decides to process this message (because of a connection break), resetting previous live information.

#### 5.5.2. Header Values

The following table describes the ODF header attributes

	T		
Attribute	Value	Comment	
DocumentCode	DDGEEEPUU	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event P according to CC @Phase UU according to CC @Unit  Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute	
DocumentType	DT_RT_RESULT	Event Unit Real Time Results message	
ResultStatus	"LIVE_UPDATE" / "LIVE_FULL" / "LIVE_MANDATORY" / "LIVE_LAST"	For Real Time, live update (for the normal operative), or live full for the resynchronization messages, as explained in chapter 6.1 and ResultStatus codes as seen in chapter 3, live Mandatory when there is a correction of previous messages and Live Last for the last message of this key of messages	
Version	1V	Please, refer to the ODF header definition	
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition	
Date	Date	Please, refer to the ODF header definition	
Time	MillisTime	Please, refer to the ODF header definition	
LogicalDate	Date	Please, refer to the ODF header definition	
Venue	CC @VenueCode	Venue code where the message is being generated	
RTSerial	Numeric	Incremental and unique number for each RT message.	
Serial	Numeric	Please, refer to the ODF header definition	

### 5.5.3. Trigger and Frequency

• For ResultStatus=LIVE_UPDATE:

Each data dictionary will define a set of triggers, which will be linked to a set of information to be included in the message. It should not be included data if not changed in regards to the previous data sent.

For ResultStatus=LIVE_FULL

Send as it will be defined for each RT transmission in the parameters of the DT_RT_GM message.

For ResultStatus=LIVE_MANDATORY

It is sent when a correction in the previous messages has to be done.

For ResultStatus=LIVE_LAST

Send as the last message (that indicates that no new messages are expected for the given ODF unique key, unless something unexpected, that needs correction of previous messages data, happens while the transmission is still open (Good night message has not been sent)).

#### 5.5.4. Message Structure

The structure of this message is the same as for the Event Unit Results (DT_RESULT) message, having also the optional message elements, which should be referenced in each ODF Sport Data Dictionary, with the following considerations:

- For the LIVE_UPDATE message:
  - Send just the extended information being updated and all athletes with some kind of information updated.
  - The Result element is optional (to allow sending some information at PhaseInfos, UnitInfos, etc., level, (such as weather), not depending including results for a particular competitor.
  - In the case some information is updated for one athlete, include the Result element (with no attributes if no Result information is informed: i.e: after the pass through an intermediate point).
  - Include all Result attributes if Result information is updated
  - Do not include the Result information, if there are not athletes included in the message with some information updated (i.e. for weather).
  - Depending on the performance, a LIVE_UPDATE message that should be generated for one specific trigger could be split in several messages in order not to make a too big message for some triggering conditions.
- For the LIVE_FULL message:
  - Include all the RT data known up to the moment of the message's generation.
- For the LIVE_MANDATORY message:
  - Include all the RT data known up to the moment of the message's generation.
- For the LIVE_LAST message:
  - Include all the RT data known up to the moment of the message's generation.

#### 5.5.5. Message Values

The message values for this message are the same as for the EventUnit Results (DT_RESULT) message, with the specific definition in the table below:

Element	Attribute	M/O	Value	Comments
---------	-----------	-----	-------	----------

Element	Attribute	M/O	Value	Comments
Result	ResultType	0	See table comment	Type of the @Result attribute
				When the Result message arrives (to include some extended results for a particular kind of competitor, either team or athlete), no attributes at Result element level will be included if ResultType attribute is empty. In this case, it means it is not being sent data for the Result element.
				On the contrary, if ResultType is informed, and the other attributes are blank, it is assumed these attributes are being reset.
	SortOrder	0	Numeric	It is now optional, because it should not be informed if ResultType is empty, as defined
			See table comment	for the ResultType attribute.
				Used to sort all results in an event unit

(Table comment: Attribute to be set Mandatory from Optional, redefined or extended according to the explanations in chapter 5.1 and 4.3. Please, refer to the ODF Sport Data Dictionary for each of the disciplines)

## 5.5.6. Message sort

Please, follow the same definition as in the case of the Event Unit Results (DT_RESULT) message.

#### 5.6. RT Cumulative Results

### 5.6.1. Description

This message is analogous to the Cumulative Results (DT CUMULATIVE RESULT) message, having the following main differences:

- The codes used in the extended data in both, DT CUMULATIVE RESULT and DT_RT_CUMULATIVE_RESULT messages might be the same, but each message could have more or less codes. However, if the same codes are used, they both are referring to the same data.
- The "ResultItems" and CumulativeResult" elements are optional because information may need to be sent before any result is awarded (for example, weather information) or the information to be sent is not related to any results.
- The RT Cumulative Results message may be used to send an interim summary of results (including rank) part way through a phase. In this case, the DocumentSubtype is used to specify the last phase or event unit that contributed results to the message.

any "LIVE FULL" "LIVE MANDATORY", ResultStatus should be always "LIVE LAST" or "LIVE UPDATE", according to the definition in chapter 6.1 and ResultStatus codes as seen in chapter 3.

If the message is sent as LIVE_UPDATE:

- It will be an incremental message, and therefore, it is not full self-content. This message is used to update information. For this reason, no data will be reset/updated unless it is clearly identified and resent in this message (and therefore, modifying its old value).
- For one particular trigger, several data could be updated at the same time for one particular trigger. In order to avoid big messages that might have a negative impact in the performance, all systems should be able to be configured to generate several smaller messages, with clusters of data, instead of one single big message, according to a particular configuration (message size). Each ODF Sport Data Dictionary should give more information about it.
- In general, it will not contain data unless there is a data modification

If the message is sent as LIVE_FULL:

it will be a self-content message. If a system decides to process this message (because of a connection break), resetting previous live information.

### 5.6.2. Header Values

The following table describes the ODF header attributes

Attribute   Value   Comment
-----------------------------

DocumentCode	DDGEEE000	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event  Each ODF Sport Data Dictionary will have to complete the explanation regarding
DocumentType	DT_RT_CUMULATIVE_RESULT	to this attribute  Event Unit Real Time
DocumentSubtype	CC @Phase or CC @Unit	Results message  It is the RSC code up to the moment the cumulative message contains information:  E.g.: DDGEEEPUU would be cumulative results up to the end of the referenced event unit
		E.g.: DDGEEEP00 would be cumulative results up to the end of the referenced phase
ResultStatus	"LIVE_UPDATE" / "LIVE_FULL" / "LIVE_MANDATORY" / "LIVE_LAST"	For Real Time, live update (for the normal operative), or live full for the resynchronization messages, as explained in chapter 6.1 and ResultStatus codes as seen in chapter 3, live Mandatory when there is a correction of previous messages and Live Last for the last message of this key of messages
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition

LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
RTSerial	Numeric	Incremental and unique number for each RT message.
Serial	Numeric	Please, refer to the ODF header definition

## 5.6.3. Trigger and Frequency

• For ResultStatus=LIVE UPDATE:

Each data dictionary will define a set of triggers, which will be linked to a set of information to be included in the message. It should not be included data if not changed in regards to the previous data sent.

For ResultStatus=LIVE_FULL:

Send as it will be defined for each RT transmission in the parameters of the DT_RT_GM message.

For ResultStatus=LIVE MANDATORY

It is sending when a correction in the previous messages has been done.

• For ResultStatus=LIVE_LAST

Send as the last message (that indicates that no new messages are expected for the given ODF unique key, unless something unexpected, that needs correction of previous messages data, happens while the transmission is still open (Good night message has not been sent)).

#### 5.6.4. Message Structure

The structure of this message is the same as for the Cumulative Results (DT_CUMULATIVE_RESULT) message, having also the optional message elements, which should be referenced in each ODF Sport Data Dictionary, with the following difference:

- For the LIVE_UPDATE message:
  - Send just the extended information being updated and all athletes with some kind of information updated.
  - The "ResultItems" element is optional, and will not be included unless it is specified in one particular ODF Sport Data Dictionary.
  - In the case some information is updated for one athlete, include the CumulativeResult element (with no attributes if no Cumulative Result

information is informed: i.e: after the pass through an intermediate point).

- Include all CumulativeResult attributes if CumulativeResult information is updated
- Depending on the performance, a LIVE_UPDATE message that should be generated for one specific trigger could be split in several messages in order not to make a too big message for some triggering conditions.
- For the LIVE_FULL message:
  - Include all the RT data known up to the moment of the message's generation.
- For the LIVE MANDATORY message:
  - Include all the RT data known up to the moment of the message's generation.
- For the LIVE_LAST message:
  - Include all the RT data known up to the moment of the message's generation.

### 5.6.5. Message Values

Please, follow the same definition as in the case of the Cumulative Results message (DT_CUMULATIVE_RESULT).

#### 5.6.6. Message sort

Please, follow the same definition as in the case of the Cumulative Results message (DT_CUMULATIVE_RESULT).

## 5.7. RT Clock

## 5.7.1. Description

This message is sent to provide accurate information about the running time while the competition is live in some sports.

### 5.7.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	DDGEEEPUU	DD according to CC @ Discipline G according to CC @ DisciplineGender EEE according to CC @ Event P according to CC @ Phase UU according to CC @ Unit
		Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute
DocumentType	DT_RT_CLOCK	Event Unit Real Time Clock message
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
RTSerial	Numeric	Incremental and unique number for each RT message.

Serial	Numeric	Please, refer to the
		ODF header
		definition

### 5.7.3. Trigger and Frequency

Please refer to each ODF Sport Data Dictionary for details on the Triggering and Frequency for that Sport.

### 5.7.4. Message Structure

In this chapter it will be described the message structure from the OdfBody element for this message.

The elements that are optional in this message according to the rules detailed in chapter 4.3 (and should be included in each ODF Sport Data Dictionary, if necessary) are:

Optional message elements referenced in each ODF Sport Data Dictionary		
UnitInfo		
Periods and its child element Period		
Result		

Competition			
	Code		
	Clock		
		Time	
		Running	
	UnitInfos (0, 1)		
		UnitInfo (0N)	
			Туре
			Code
			Pos
			Value
	Periods (0, 1)		
		Period (1N)	
			Code
			HomePeriodScore
			AwayPeriodScore
			Duration
	Result (0, 2)		
		Result	
		SortOrder	

## 5.7.5. Message Values

Element	Attribute	M/O	Value	Comments	
Competition	Code	М	CC @Competition	Unique ID for competition	
Clock	Time	M	MM:SS	Value of the clock	
			90:00		
Clock	Running	M	Y or N	Indicates if the clock is currently	
				running.	
UnitInfo	Туре	М	See table comment	Type (categorization) of UnitInfo.	
	Code	М	See table comment	Key of the UnitInfo element, to	
(Unit info				uniquely identify this element.	

Olympic Data Feed - © IOC RT Clock

Element	Attribute	M/O	Value	Comments
item	Pos	0	See table comment	An optional numerical value used to
associated to				sort unit info items with same type
the event				and code (the attribute Pos could be
unit)				the period, as example).
	Value	0	See table comment	Value of the @Code (+ @Pos)
				referenced UnitInfo.
Period	Code	М	See table comment	Key of the Period element to
				uniquely identify this element.
(Period in	HomePeriod	0	See table comment	Score of the home competitor just for
which the	Score			this period

arriving)	Duration	0	See table comment	Duration of the period
Result	Result	0	See table comment	The result of the competitor in the
				event unit
	SortOrder	М	Numeric	Used to sort all results in an event
				unit
			See table comment	

# 5.7.6. Message sort

There is not any message sorting requirement for this message.

## 5.8. RT GPS Data

## 5.8.1. Description

This message is sent to provide information about the position of the competitors.

### 5.8.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	DDGEEEPUU	DD according to CC @Discipline G according to CC @DisciplineGender EEE according to CC @Event P according to CC @Phase UU according to CC @Unit
		Each ODF Sport Data Dictionary will have to complete the explanation regarding to this attribute
DocumentType	DT_RT_GPS_DATA	Event Unit Real Time Clock message
Version	1V	Please, refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Please, refer to the ODF header definition
Date	Date	Please, refer to the ODF header definition
Time	MillisTime	Please, refer to the ODF header definition
LogicalDate	Date	Please, refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated
RTSerial	Numeric	Incremental and unique number for each RT message.
Serial	Numeric	Please, refer to the ODF header definition

## 5.8.3. Trigger and Frequency

Please refer to each ODF Sport Data Dictionary for details on the Triggering and Frequency for that Sport.

## 5.8.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition			
	Code		
	Competitor (1N)		
		ID	
		DistanceToFinish	
		DistanceFromStart	
		DistanceToLeader	
		Speed	
		ExtendedGPSData (0N)	
			Туре
			Code
			Pos
			Value

### 5.8.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	M	CC @Competition	Unique ID for competition
GPS	ID	M	S(25)	Competitor ID
	DistanceToFinish	М	Numeric	Distance (in meters) from the competitor position to the finish line
	DistanceFromStart	М	Numeric	Distance (in meters) from the Start Line to the competitor position
	DistanceToLeader	M	Numeric	Distance (in meters) from the competitor position to the position of the leader
	Speed	M	Numeric	Speed. Please refer to each ODF Sport Data Dictionary for details on the measure units.
ExtendedGPSData	Туре	М	Please refer to the ODF Sport Data Dictionary for each of the disciplines	Type (categorization) of the ExtendedAction
	Code	M	Please refer to the ODF Sport Data Dictionary for each of the disciplines	Key of the ExtendedAction, to uniquely identify this element.
	Pos	0	Numeric Please refer to the ODF Sport Data Dictionary for each of the disciplines	An optional numerical value used to sort ExtendedAction with same type and code.

Element	Attribute	M/O	Value	Comments
	Value	0	Please refer to the	Value of the @Code (+ @Pos)
			ODF Sport Data	referenced ExtendedAction
			Dictionary for each	
			of the disciplines	

## 5.8.6. Message sort

There is not any message sorting requirement for this message.

# 6. PDF feed

# 6.1. Overall perspective

ODF-PDF is the feed that provides Official Results Reports in PDF format to the user.

# 6.1.1. PDF feed list of messages

The following table lists the ODF-PDF feed messages

Message Type	Message name
DT_PDF	PDF Message
DT_PDF_GM	PDF Discipline/venue good morning
DT_PDF_GN	PDF Discipline/venue good night
DT_PDF_SERIAL	PDF Serial Message

# 6.1.2. PiT Messages definition

There are two types of PDF messages:

- RT Control messages (DT_PDF_GM, DT_PDF_GN and DT_PDF_SERIAL)
- RT Content messages (DT_PDF)

# 6.1.3. PDF message triggers

Content message triggers are defined in ORIS (or PRIS).

# **6.2. PDF Feed Messages**

# 6.2.1. PDF message

## 6.2.1.1. Description

The PDF message is a message containing an encapsulated PDF file. This PDF message is a generic message for all sports.

#### 6.2.1.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentSubcode	@ RSC	Depending on the PDF the RSC could be: SS0000000 (sent at Sport level) DD0000000 (Discipline level) DD0VVV000 (Venue level) DDG000000 (Gender level) DD0EEE000 (All Gender Event level) DD0EEEP00 (All Gender Phase level) DD0000Ydd (Daily level where dd is the Day) DDG000Ydd (Gender Day level) DDGEEEYdd (Style Day level) DD0EEEYdd (Event Day level) DD0000Znn (Session level where nn is the session number) DDGEEEZnn (Style Session level) DDGEEEOnn (Team level) DDGEEE000 (Event level) DDGEEEP00 (Phase level) DDGEEEPUU (Event unit level)
DocumentSubcode	S(10)	Optional attribute defined in the Header Values section of the Common Codes document.  Identifies PDF reports by NOC or by Day or by Session or Official or Sport Communications pdf by Item Number
DocumentType	DT_PDF	PDF message
DocumentSubtype	ORIS Type (or PRIS Type)	ORIS (or PRIS) output type (C51A, C73R, etc.)
Version	1V	Refer to the ODF header definition
ResultStatus	S(15)	Refer to the ODF header definition. The attribute is mandatory when the EI_PDF Type value of the element ExtendedInfo is RESULT.
Language	S(3)	Refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is being generated

#### 6.2.1.3. Trigger and Frequency

The general rule is that this message will be sent depending on the trigger and frequency defined in ORIS (or PRIS).

### 6.2.1.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition			
	Code		
	ExtendedInfos		
		ExtendedInfo (1N)	
		(114)	Turna
			Туре
			Code
	PDFData		
		-	

### 6.2.1.5. Message Values

All mandatory attributes have to appear in any ODF PDF message.

Element	Attribute	M/O	Value	Comments
Competition	Code	M	CC @Competition	Unique ID for competition
ExtendedInfo	Туре	M	EI_PDF or	Type (categorization) of
			EI_PDF_ITEM	ExtendedInfo.
				Use only EI_PDF_ITEM in the
				case of a Official or Sport
				Communication .
	Code	М	CC @CodePDF or	Key of the ExtendedInfo, to
			Numeric	uniquely identify this element.
				Numeric only in case that use
				<pre>@Type= EI_PDF_ITEM (send in</pre>
				this attribute the
				DocumentSubtype of the
				DT_COMMUNICATION
				relationated)
PDFData	-	M	Free Text	Base64-encoded file (a PDF
. 5. 54.4				file)

#### 6.2.1.6. Message sort

There is not any message sorting requirement for this message.

### 6.2.2. PDF Discipline/venue good morning

#### 6.2.2.1. Description

The "PDF discipline/venue good morning" is a message to indicate the start of day of the operations for one specific discipline in one specific venue within a logical day.

#### 6.2.2.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	CC @GMGNCode	Discipline/venue code, consisting
		of DD0VVV000, where DD stands
		for discipline, VVV for venue
DocumentType	DT_PDF_GM	Discipline/venue good morning
Version	1V	Refer to the ODF header definition
FeedFlag	"P"-Production	Refer to the ODF header definition
	"T"-Test	
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Venue	CC @VenueCode	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition

#### 6.2.2.3. Trigger and Frequency

The message is sent as soon as the operations for one particular logical day are about to begin, and always before any other PDF message for that logical day.

#### 6.2.2.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition		
	Code	
	Config	
		SDelay

#### 6.2.2.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	M	CC @Competition	Unique ID for competition
Config	SDelay	M	Numeric	Interval in seconds between DT_PDF_SERIAL messages.
				This value is 3600.

#### 6.2.2.6. Message sort

There is no sort order for this message.

### 6.2.3. PDF Discipline/venue good night

#### 6.2.3.1. Description

The "PDF discipline/venue good nighy" is a message to indicate the end of day of the operations for one specific discipline in one specific venue within a logical day.

#### 6.2.3.2. Header Values

The following table describes the ODF header attributes.

Attribute	Value	Comment
DocumentCode	CC @GMGNCode	Discipline/Venue code, consisting of DD0VVV000, where DD stands for discipline, VVV for venue
DocumentType	DT _PDF_GN	Discipline/venue good night (for PDF feed)
Version	1V	Refer to the ODF header definition
FeedFlag	"P"-Production "T"-Test	Refer to the ODF header definition
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Venue	CC @VenueCode	Refer to the ODF header definition
Serial	Numeric	Refer to the ODF header definition

#### 6.2.3.3. Trigger and Frequency

The message is sent as soon as the operations for one particular logical day are finished, to formally indicate the end of that logical day.

#### 6.2.3.4. Message Structure

The message structure just includes an OdfBody element (with their ODF header attributes, but no other hierarchical element below OdfBody).

#### 6.2.3.5. Message Values

There are not attributes to be defined in this message.

#### 6.2.3.6. Message sort

There is no sort order for this message

### 6.2.4. PDF Serial Message

#### 6.2.4.1. Description

The PDF Serial Message is a message containing last serial numbers of today's

#### 6.2.4.2. Header Values

The following table describes the ODF header attributes

Attribute	Value	Comment
DocumentCode	CC @GMGNCode	Discipline/venue code, consisting
		of
		DD0VVV000, where DD stands for
		discipline, VVV for venue
DocumentType	DT_PDF_SERIAL	PDF Serial message
Version	1V	Refer to the ODF header definition
FeedFlag	"P"-Production	Refer to the ODF header definition
	"T"-Test	
Date	Date	Refer to the ODF header definition
Time	MillisTime	Refer to the ODF header definition
LogicalDate	Date	Refer to the ODF header definition
Venue	CC @VenueCode	Venue code where the message is
		being generated
Serial	Numeric	Always "-1"

#### 6.2.4.3. Trigger and Frequency

Message producer will send this message when the delay defined in the SDelay parameter of the DT_PDF_GM expires.

DT_PDF_SERIAL message will be provided just before the DT_PDF_GN message, too.

#### 6.2.4.4. Message Structure

The following elements describe the message structure from the OdfBody element.

Competition		
	Code	
	Serial(0N)	
		DocumentCode
		DocumentSubcode
		DocumentType
		DocumentSubtype
		DateTime
		Serial
		Version

#### 6.2.4.5. Message Values

Element	Attribute	M/O	Value	Comments
Competition	Code	М	CC @Competition	Unique ID for competition

Element	lement Attribute		Value	Comments	
Serial	Documentcode	M	S(9)	This four attributes identify a PDF	
	DocumentSubcode	0	S(10)	message.	
	DocumentType	M	S(20)		
	DocumentSubtype	0	S(20)		
	DateTime	М	DateTime	Time when the PDF message was	
				sent for the last time.	
	Serial	M	Numeric	Last serial number of the PDF	
				message.	
	Version	М	Numeric	Last version of the PDF message.	

## 6.2.4.6. Message sort

Order by DocumentCode + DocumentSubcode + DocumentType + DocumentSubtype.

# **DOCUMENT CONTROL**

# **Version history**

Version	Date	Comments	
R1 v1.0	15 March 2013	First version; Sport messages splitted from latest London documents. Central messages scplitted from Sochi version of 15 March 2013	
R1 v1.1	12 April 2013	Reviewers comments	
R1 v1.2	19 April 2013	Approved version	
R1 v1.3	25 October 2013	New version aligned with R3-v3.3 APP (11 October 2013) Sochi Document	

**File reference:** ODF/INT142-R1 v1.3 APP

# **Change Log**

Version	Status	Changes on version
R1 v1.0	SFR	<ul> <li>First version;</li> <li>Sport messages splitted from latest London documents.</li> <li>Central messages scplitted from Sochi version of 15 March 2013</li> </ul>
R1 v1.1	SFA	<ul> <li>Several typos</li> <li>Horses messages (DT_BIO_HORxxx and DT_PARTIC_HORSExxx) removed</li> <li>Horses codes removed</li> <li>References to NOC/NPC changed to CGC</li> <li>Sport Codes of non Commonwealth sports removed (@BoatStatus, @JumpOf or @Piste)</li> <li>DT_COMMUNICATION: Saling specific definitions removed</li> <li>DT_RECORDS: BOP codes changed by BGP</li> </ul>
R1 v1.2	APP	Approved version
R1 v1.3	APP	<ul> <li>DT_COMMUNICATION: New DocumentSubcode SPORT_NOTICE</li> <li>DT_PDF: DocumentSubcode definition for Sport Communication</li> <li>DT_BIO_PAR: Participant/Language /Chighlights/ Highlights@Type changed to Optional</li> <li>DT_BCK and DT_NEWS: Document@ReportType value changed from CC@ReportType to S(3). ReportType Common Code removed</li> <li>CC @Category Global Codes explanation changed</li> <li>CC @Item Global Codes explanation changed</li> <li>CC @Functions; Lenght changed to S(30) to be compatible across all summer and winter sports</li> <li>Added Venue attribute as mandatory for all Central Messages, except the import messages.</li> <li>DT_BIO_PAR, DT_BIO_TEA, DT_BIO_NOC values specified as "free text" should be specified as "RTF text"</li> <li>CC @Competition format changed to S(7)</li> <li>DT_SCHE_RES_NOC message extended</li> <li>Boolean value to be 'true' / 'false' across the document. Now sometimes 'True' 'False' is requested</li> </ul>
