### 2.2.1 List of participants by discipline / List of participants by discipline update

#### 2.2.1.1 Description

A participant is considered to be any individual (type athlete, participating or not in the current games) or any official in one or several disciplines or a competitor being part of a team (team member).

Although the participant may participate in more than one event or more than one discipline, this message just contains the information for the discipline of the message, listing the information of all the events for that discipline.

This message includes historical athletes that do not participate in the current competition. Historical athletes will not be registered to any event.

It is important to note that all the sport messages that make references to athletes (start list, event unit results, etc.) will always match the athlete ID with the athlete ID in this message.

List of participants by discipline (DT\_PARTIC) is a bulk message, provided for each discipline. It is a complete participant information message for one particular discipline. The arrival of this message resets all the previous participants' information for one particular discipline. This message can include a list of current athletes, officials, coaches, guides, technical officials, Reserves and historical athletes.

List of participants by discipline update (DT\_PARTIC\_UPDATE) is an update message. It is not a complete list of participants' information by discipline message, only the participant data being modified, i.e. if some data of one participant changes, the element Participant for it with all its children and attributes must be sent.

The key of the information updated consists of the following attribute: Participant @Code. Therefore, any new or updated Participant Discipline-Event will be identified by all these attributes.

#### 2.2.1.2 Header Values

The following table describes the message header attributes.

Attribute	Value	Comment
CompetitionCode	<a href="#">CC @Competition</a>	Unique ID for competition

Time	Time	Time up to milliseconds when the message is generated, expressed in the local time zone where the message was produced.
LogicalDate	Date	<p>Logical Date of events. This is the same as the physical day except when the unit or message transmission extends after midnight.</p> <p>If an event unit continues after midnight (24:00), all messages produced will be considered as happening at the logical date on which the event unit began (e.g. for a session which began at 21:00 on Aug 2 and ended at 1:20 on Aug 3, the message will all be dated Aug 2).</p> <p>The end of the logical day is defined by default at 03:00 a.m.</p> <p>For messages corrections, like invalidating medals or Records, it will be the LogicalDate of the day of the correction.</p> <p>Logical Date is expressed in the local time zone where the message was produced.</p>

### 2.2.1.3 Trigger and Frequency

The DT\_PARTIC message is sent as a bulk message approximately one month before the Games. It is sent several times up to the date of transfer of control to OVR after which only DT\_PARTIC\_UPDATE messages are sent.

The DT\_PARTIC\_UPDATE message is triggered when there is a modification in the data for any individual after the transfer of control to OVR.

This is always a full message and all applicable elements and attributes are always sent.

## 2.2.4 Cumulative Results

### 2.2.4.1 Description

The Cumulative Results is a message containing the cumulative results for the competitors in a group of units either in a single phase or over a number of phases. This message is used when the competitor scores accumulate over the different units.

The difference between the Phase Results message (DT\_PHASE\_RESULTS) and the Cumulative Results (DT\_CUMULATIVE\_RESULT) is that the first one includes only the results for the phase independently from previous phases, while the Cumulative Results is for competitions where scores of the competitors are accumulated over a number of units and/or phases.

The Cumulative Results message is be used to send an intermediate summary of results (including rank) part way through a phase. In this case, the DocumentSubtype is used to specify the last event unit that contributed results to the message.

Following behavior is for competitions with subdivisions (non-Olympic events):

As soon as a competitor is included in the message, all apparatuses the competitor may compete on should be listed. Apparatuses where the competitor has not competed yet should be exported with ValueType SC@ResultType:NO\_SCORE. Once a result is obtained on the apparatus, the ValueType, Value, Rank, etc. should be updated accordingly. It is essential to understand that competitors who have not performed on any apparatus yet will NOT be listed in the message. Thus, all competitors in the message will always have at least one ExtendedResult Code=CC@Apparatus with ValueType different from SC@ResultType:NO\_SCORE.

Competitors are included in Cumulative Result messages only as soon as they have obtained a result in the current subdivision.

Upon rotation change, two different cases are highlighted:

- Competitors who, by choice or otherwise, have not obtained a result - valid or invalid - in the previous rotation (before rotation change), and therefore cannot be ranked in the All-Around at all in the future, will be entirely removed from the message.
- Competitors who have completed all apparatuses so far, except for the result to be obtained in the new rotation, are included - without rank - at the end of the message. As the new rotation progresses, the competitors obtaining results are progressively reinstated in the ranked results.

Competitors who, on the other hand, do not obtain a result in the new rotation will, at the end of the rotation, fall into the first case and be removed from the message.

At the end of the subdivision, because competitors will not be given any new chance of obtaining sufficient results to be included in the All-Around ranking, competitors falling in either cases are entirely removed from the message, not to return. This change should arise as soon as possible, but at the very least as soon as the subdivision result status is UNOFFICIAL.

## 2.2.6 Configuration

### 2.2.6.1 Description

The Configuration is a message containing general configuration.
