2.1 Freestyle Skiing Overview

MESSAGES IN EACH EVENT

* Big Air, Half Pipe, Slopestyle

Each of these events can be conducted with single heat or two heats in qualification (best of two runs), and up to 3 Runs during the Final.

Each run (or each run in each heat if heats apply) in the competition is scheduled as a separate schedule item. Some can also be conducted in “double-up” format where athletes in qualification are in two heats running alternately. Or two genders running alternately.

Note that Slopestyle default judging format is Section-by-Section, but it can be conducted as overall judging (no sections).

The messages containing results information are separated into two message, one DT_RESULT for qualification and one DT_RESULT for the finals. These messages contain all the competitors participating in the phase, with their results, regardless of the number of runs or heats or formats. The runs and heats are scheduled separately.

* Ski Cross

The initial phase will be qualification or seeding depending on the number of competitors. There are up to two runs. There is a single DT_RESULT for qualification.

The finals consist of multiple heats with leaders progressing to the next phase. There is one DT_RESULT per heat in addition to a DT_BRACKETS message.

* Individual Aerials

Qualification in aerials is conducted with two rounds, Qualification 1 and Qualification 2. There is a single DT_RESULT for qualification including both qualification 1 & 2. In the finals there are two independent rounds, Final 1 and Final 2. There is a single DT_RESULT for each of the two finals final.

Note that qualification and final 1 includes 2 jumps, and final 2 is one jump only but both use the same structure.

* Team Aerials

Team aerials has straight finals there are two independent rounds, Final 1 and Final 2. There is a single DT_RESULT for each final. Individual athlete results appear under the athlete element, not by run.

* Moguls

Qualification in moguls is conducted with two rounds, Qualification 1 and Qualification 2. There is a single DT_RESULT for qualification including both qualification 1 & 2. In the finals there are three independent runs, Final 1, Final 2 and Final 3. There is a single DT_RESULT for each run.

SCHEDULE

The DT_SCHEDULE/DT_SCHEDULE_UPDATE will include every heat & run/jump in qualification and finals as well as at phase level (matching the DT_RESULT messages above).

2.2 Applicable Messages

The following table is a full list of all ODF messages and describes the list of messages used in this

discipline.

- The column “Message type“ indicates the DocumentType that identifies a message
- The column “Message name“ is the message name identified by the message type

2.3 Messages

2.3.1 List of participants by discipline / List of participants by discipline update

2.3.1.1 Description

A participant is considered to be any individual (type athlete, participating or not in the current games) or any official in one or several disciplines or a competitor being part of a team (team member).

Although the participant may participate in more than one event or more than one discipline, this message just contains the information for the discipline of the message, listing the information of all the events for that discipline.

It is important to note that all the sport messages that make references to athletes (event unit start list and results, phase results, medallists etc.) will always match the athlete ID with the athlete ID in this message. The historical athletes will be used to match historical athlete information as it appears in the records message when sending the previous record information and this previous record was an historical record not being broken in the current competition.

List of participants by discipline (DT_PARTIC) is a bulk message, provided for each discipline. It is a complete participant information message for one particular discipline. The arrival of this message resets all the previous participants' information for one particular discipline. This message includes a list of current athletes, officials, coaches, guides, technical officials, reserves and historical athletes regardless of their status.

List of participants by discipline update (DT_PARTIC_UPDATE) is an update message. It is not a complete list of participants' information by discipline message, only the participant data being modified, i.e. if some data of one participant changes, the element Participant for it with all its children and attributes must be sent.

The key of the information updated consists of the following attribute: Participant @Code. Therefore, any new or updated Participant Discipline-Event will be identified by all these attributes.

2.3.1.2 Header Values

The following table describes the message header attributes.

2.3.1.3 Trigger and Frequency

The DT_PARTIC message is sent as a bulk message prior to the Games. It is sent several times up to the date of transfer of control to OVR after which only DT_PARTIC_UPDATE messages are sent.

The DT_PARTIC_UPDATE message is triggered when there is a modification in the data for any individual after the transfer of control to OVR.

2.3.2 List of teams / List of teams update

2.3.2.1 Description

DT_PARTIC_TEAMS contains the list of teams related to the current competition.

A team is a type of competitor, being a group of two or more individual athletes participating together in one event. One team participates in one event of one discipline. When one team participates in multiple events, there will be one team for each event for the same group. Also when the same organisation participates in the same event twice, there will be different teams.

List of teams (DT_PARTIC_TEAMS) is a bulk message by discipline. The list is always complete. The arrival of this message resets all the previous participant teams' information for that discipline. It is assumed that all teams appearing in this list are valid, in the meaning that they are participating or they could participate in one event.

List of teams update (DT_PARTIC_TEAMS_UPDATE) is an update message. It is not a complete list of teams' information message. It only contains the data of a team being modified.

This message should only be used to build a standalone current table and not used to merge data with the DT_RESULT message. If the message is merged there is be conflicts where multiple people can have the same intermediate rank and the full DT_RESULT is only updated after each athlete.

2.3.4.2 Header Values

The following table describes the message header attributes.

Attribute	Value	Comment

DocumentCode	CC @Phase CC @Unit	Full RSC at phase or unit level as appropriate. The DocumentCode will be sent according to the header values.

2.3.4.3 Trigger and Frequency

This message is sent:

- * Before the competition or run starts with the value of NEXT
- * At any time a competitor starts. (This athlete/pair will be considered current) and there will be a new 'next' (unless last athlete).
- * Immediately after every addition/change in data during the run.
- * Immediately after each competitor completes the course and the data is available.

Each message will only include the athletes currently on the course and the one/pair to follow 'Next'; this is usually not more than four athletes.

This message is only applicable in Cross in this discipline.

The @ResultStatus attribute will vary depending on the competition status.

- * Send with ResultStatus = "START_LIST" when bracket available and no units are complete
- * Send with ResultStatus = "INTERMEDIATE" until the last event unit (Gold Medal unit) is Unofficial (i.e. for all event units up until the Gold Medal match is completed for an event)
- * Send with ResultStatus = "UNOFFICIAL" when the last event unit for an event (Gold Medal match) has

Unofficial status.

* Send with ResultStatus = "OFFICIAL" when the last event unit for an event (Gold Medal match) has Official status.

Depending on the sport rules include all competitors in the competition as all can be ranked (as in Marathon) or only include those with a final ranking as other are unranked (as in tennis).
